Transforming and Innovating the Discovery and Development of Novel, Class Leading GPCR-Targeted Therapies

November 2024

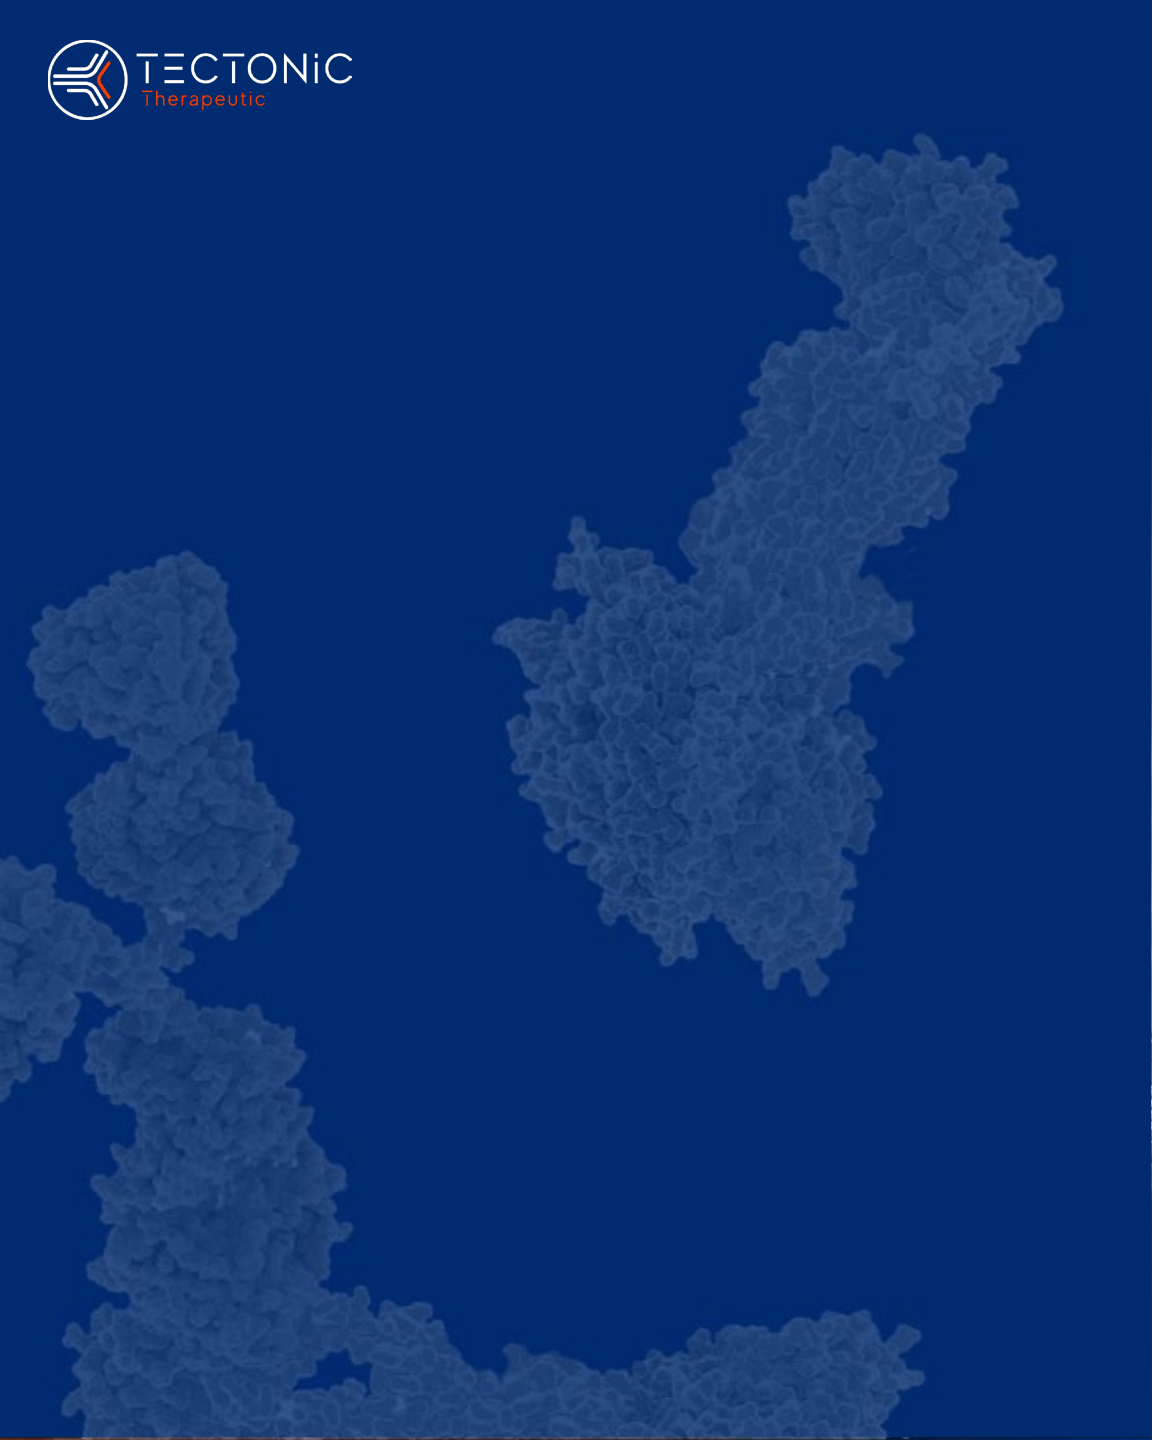
TECTONIC Therapeutic

DISCLAIMER

Statements contained in this presentation regarding matters that are not historical facts are “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995, as amended. Words such as "anticipates," "believes," "expects," "intends," “plans,” “potential,” "projects,” “would” and "future" or similar expressions are intended to identify forward-looking statements. Each of these forward-looking statements involves substantial risks and uncertainties that could cause actual results to differ significantly from those expressed or implied by such forward-looking statements. Forward-looking statements contained in this presentation include, but are not limited to, statements regarding: the design, objectives, initiation, timing, progress and results of current and future preclinical studies and clinical trials of our product candidates, including the ongoing Phase 1b and Phase 2 clinical trial for TX45, in Group 2 Pulmonary Hypertension; candidate selection for our second program in HHT; the expected timing of program updates and data disclosures; the timing of filing INDs and other regulatory documents; the timing and likelihood of seeking regulatory approval for our product candidates including TX45; the competitive landscape for our product candidates; our ability to identify and develop additional product candidates; and our estimates regarding expenses, future revenue, capital requirements, cash runway and needs for additional financing.

These forward-looking statements reflect our current beliefs and expectations. Many factors may cause differences between current expectations and actual results, including the early stage of our development efforts; success in preclinical testing and earlier clinical trials does not ensure that later clinical trials will generate the same results or otherwise provide adequate data to demonstrate the efficacy and safety of a product candidates; clinical site activation rates or clinical trial enrollment rates that are lower than expected; changes in expected or existing competition; changes in the regulatory environment; the uncertainties and timing of the regulatory approval process; the impact of macroeconomic conditions, including the conflict in Ukraine and the conflict in the Middle East, heightened inflation and uncertain credit and financial markets, on our business, clinical trials and financial position; and unexpected litigation or other disputes. These and other risks are described more fully in our filings with the Securities and Exchange Commission (“SEC”), including the risks detailed in the prospectus filed with the SEC pursuant to Rule 424(b)(3) on May 3, 2024, and other documents we subsequently filed with or furnished to the SEC. All forward-looking statements contained in this presentation speak only as of the date on which they were made. Except as required by law, we assume no obligation to update any forward-looking statements contained herein to reflect any change in expectations, even as new information becomes available.

This presentation also contains estimates and other statistical data made by independent parties and by us relating to market size and growth and other data about our industry. This data involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such estimates. Neither we nor any other person makes any representation as to the accuracy or completeness of such data or undertakes any obligation to update such data after the date of this presentation. In addition, projections, assumptions and estimates of our future performance and the future performance of the markets in which we operate are necessarily subject to a high degree of uncertainty and risk.



Agenda

I. Company Overview

II. GEODe™ Platform

III. TX45 Relaxin in Group 2 Pulmonary Hypertension

- i. Overview of Target and Indication
- ii. Patient Journey
- iii. Clinical Data
- iv. Preclinical Data
- v. Clinical Program

IV. HHT Program

V. Summary

Tectonic Therapeutic – Transforming the Discovery of Novel GPCR-Targeted Therapies, Innovating in Their Development

Validated GEODe™ Platform

- Validated platform to discover and optimize biologics that target GPCRs
- Prioritizing high value GPCR targets, where small molecules are not the right modality

Phase 2 Best-In-Class Relaxin Agonist for "Group 2 PH"

First-In-Class "HHT" Program

- First two assets address indications with no approved therapy
  1. **TX45**: RXFP1 agonist - potential therapy for Group 2 PH[1] in HFpEF[2]
     - >600,000 Patients in US alone (>20 times PAH)
     - Phase 1a trial complete. TX45 was well tolerated, no immunogenicity observed, and a favorable PK/PD relationship was demonstrated
     - Phase 1b hemodynamic proof of concept data expected late Q1'25 or early Q2'25
     - Phase 2 randomized trial initiated in Aug '24, data expected in 2026
  2. **TX2100**: Development Candidate chosen addressing hereditary hemorrhagic telangiectasia (HHT), Phase 1 initiation expected 4Q'25 or 1Q'26

Team with a Track Record of "Firsts"

- Team with extensive track record of drug discovery and development success, resulting in 20 "first" approvals across multiple therapeutic areas

Reverse Merger Closed June 2024

- Well capitalized by a syndicate of leading institutional funds
- **$159M[3] cash as of 9/30/24, expected to provide runway into mid-2027**

[1]Pulmonary Hypertension; [2]Heart Failure with Preserved Ejection Fraction

Multiple Awards and Fellowships
(Biomedical Research, NIH, Amgen, Sloan Research)

Team Track Record: >20 1st Approvals with >$50B In Annual Sales

1st approvals and indication expansions shown below

ONCOLOGY/ IO

- KEYTRUDA (pembrolizumab) Injection 100 mg
- Abecma (idecabtagene vicleucel)
- BAVENCIO (avelumab) Injection 20 mg/mL
- Breyanzi (lisocabtagene maraleucel)
- Campath (Alemtuzumab) For Intravenous Use Only
- BRAFTOVI (encorafenib)
- VELCADE (bortezomib)
- ZYKADIA (ceritinib) 150 mg tablets
- TEPMETKO (tepotinib)
- Odomzo (sonidegib) capsules 200mg

IMMUNOLOGY/ INFLAMMATION

- DUPIXENT (dupilumab)
- Amevive (alefacept)
- Entyvio (vedolizumab)
- MAVENCLAD (cladribine) tablets 10 mg
- ARCOXIA (etoricoxib)
- MAYZENT (siponimod) 1 mg • 2 mg tablets
- Simponi (golimumab)
- Remicade (INFLIXIMAB)
- ZEPOSIA (ozanimod)
- RAPTIVA (efalizumab)
- VIOXX (rofecoxib, MSD)

CARDIO/ METABOLISM

- Entresto (sacubitril/valsartan) tablets 24/26mg • 49/51mg • 97/103mg
- Praluent (alirocumab) Injection 75mg/mL 150mg/mL
- CAMZYOS (mavacamten) capsules

RESPIRATORY / ALLERGY

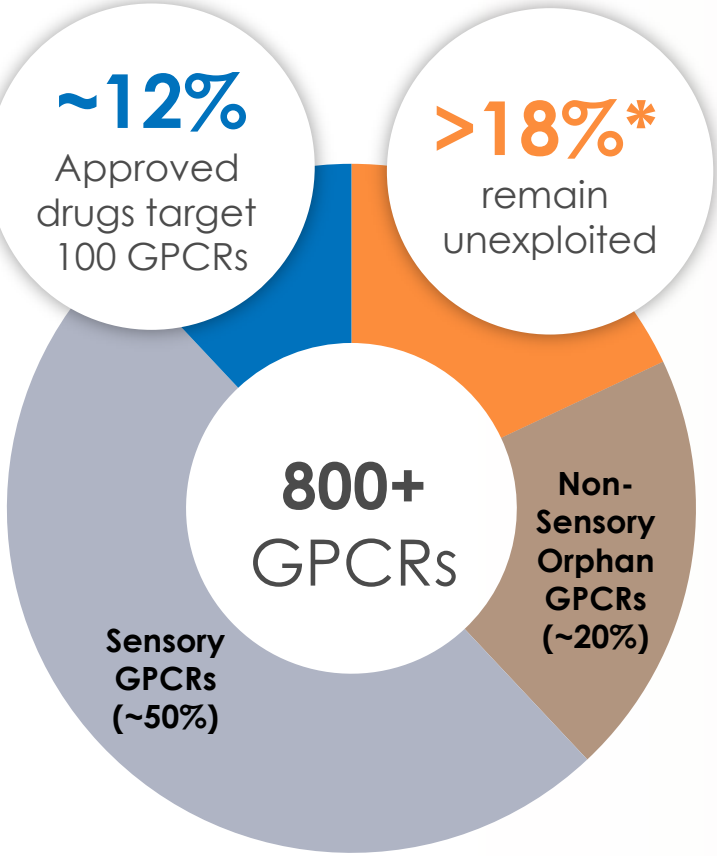
- DUPIXENT (dupilumab)
- Claritin
- SINGULAIR (montelukast sodium)
- Nasonex (Mometasone Furoate Monohydrate)
- GRASTEK Timothy Grass Pollen Allergen Extract Tablet for Sublingual Use 2800 BAU

OTHER

- Reblozyl (luspatercept-aamt) for injection 25mg • 75mg
- INREBIC
- EMEND Aprepitant

TECTONIC Therapeutic

Biologics Offer Advantages Over Small Molecules in Targeting GPCRs in Multiple Settings



- **>470 Approved drugs (~33% of all)**
- **>$180B in annual sales**
- **Predominantly small molecules**
- **Only 3 are antibodies**

→ **When difficult to drug with small molecules**
Biologic captures complexity of ligand / receptor engagement

→ **If target site similar to domains of different proteins**
Biologic minimizes off target binding to improve safety / tolerability

→ **If use case requires tissue /compartment targeting**
Engineer biologic to target or exclude compartment as needed

→ **When multi-modal action needed**
Bispecific approach enables dual target engagement

(*) Hauser, A.S. et al., Cell. 2018 Jan 11; 172(1-2): 41–54.e19.

* 18% = 100% - 12% (approved drug targets) – 50% (sensory) – 20% (non-sensory, orphan)

TECTONIC Therapeutic

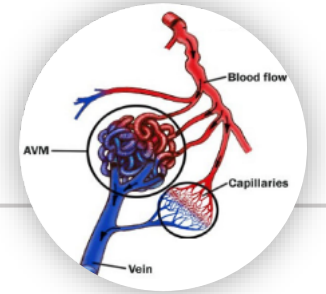
Our Unique Pipeline Opportunities are Enabled by Biologic Targeting of GPCRs

GROUP 2 PULMONARY HYPERTENSION (Group 2 PH) IN PHASE 2

Potential Best-in-Class

RXFP1 Agonist[1]

Supporting clinical data

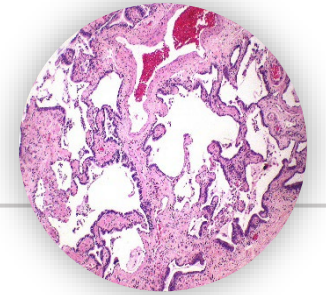


HEREDITARY HEMORRHAGIC TELANGIECTASIA (HHT)

First in Class & Indication

GPCR Antagonist[2] (anti-angiogenic)

Target pathway linked to disease genetics



FIBROSIS

Bi-specific Approach

GPCR Modulator[2] (anti-fibrotic)

Supporting clinical data for one component of bispecific

Scale of POC studies: ~50-200 patients per indication
3-6 months treatment

1. Fusion protein – lead molecule in-licensed from Harvard U., optimized using GEODe platform
2. GPCR targeted therapeutics discovered internally using GEODe platform

TECTONIC Therapeutic

Pipeline of GPCR-Targeted Biologics with Multiple Potential Value Infection Points Ahead

Program	Preclinical	Phase 1	Phase 2	Phase 3	Indication
RXFP1 Agonist (TX45 – Fc-relaxin)		*Phase 1b (ongoing) Hemodynamic data late Q1'25 / early Q2'25*	*Phase 2 Initiated in August '24 Randomized Phase 2 data in 2026*		Group 2 PH[1] in Patients with Heart Failure with Preserved Ejection Fraction (HFpEF)
GPCR Antagonist (TX2100 -undisclosed)	*Development Candidate Selected Nov '24*	*Initiation Planned Q4'25 / Q1'26*			Hereditary Hemorrhagic Telangiectasia (Osler Weber Rendu Syndrome)
Bi-functional GPCR Modulator	Discovery				Fibrosis
GPCR Modulators	Discovery				Multiple Indications

(1) Pulmonary Hypertension

TECTONIC Therapeutic

GEODe™ PLATFORM

Proprietary, validated platform, enables reproducible discovery and optimization of GPCR targeted biologics

Solving Key Challenges in GPCR Targeted Biologics Discovery

Challenges

RETAIN
endogenous GPCR structure to enable screening against relevant form of receptor

PURIFY
target in sufficient quantities to power screening campaign

INDUCE
immune response to human GPCR in animals if immunization strategy is pursued

STABILIZE
receptor in active conformation to enable agonist discovery

GEODe™ Platform Features Designed for Success

1.
Receptor Engineering, and Purification Technology
delivers abundant receptor reagent in native conformation

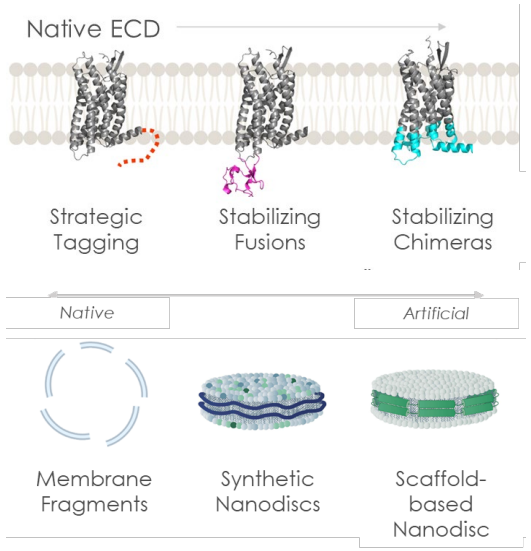
2.
In-vitro Yeast Display Libraries
provide high-diversity, without immune editing

3.
Protein Engineering
Optimize protein pharmacology
Engineer antigen formats to enable screening for agonists or antagonists as needed

Proprietary GEODe™ platform spans three enabling technologies to identify and optimize potent GPCR targeted biologics

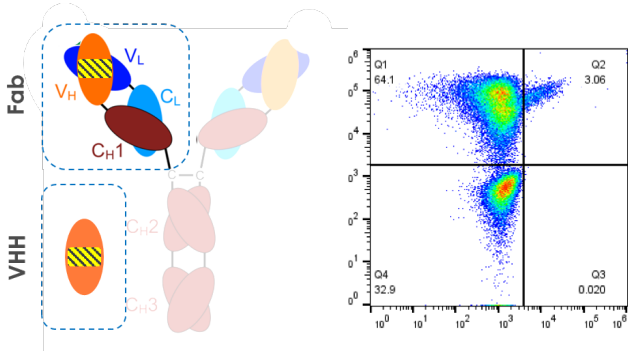
1. EXPRESSION AND PURIFICATION TECHNOLOGY

Produce Sufficient Quantities and Stabilize Them in the Correct Conformation



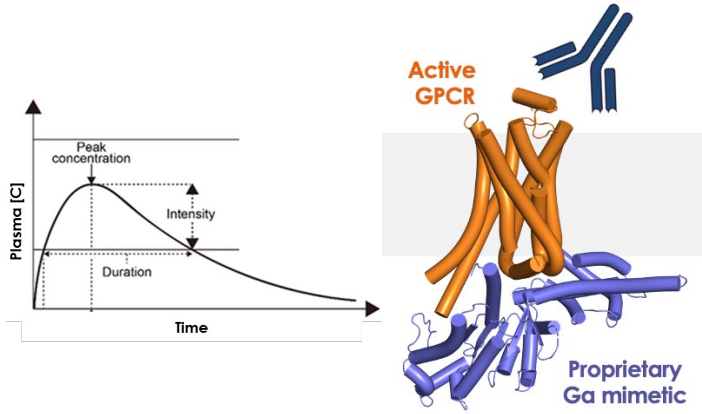
2. IN-VITRO YEAST DISPLAY LIBRARIES

Efficiently Screen Diverse Antibody Libraries Against GPCRs



3. PROTEIN ENGINEERING

- **Optimize Protein Pharmacology**
- **Engineer Proprietary Scaffolds for Agonist Discovery**

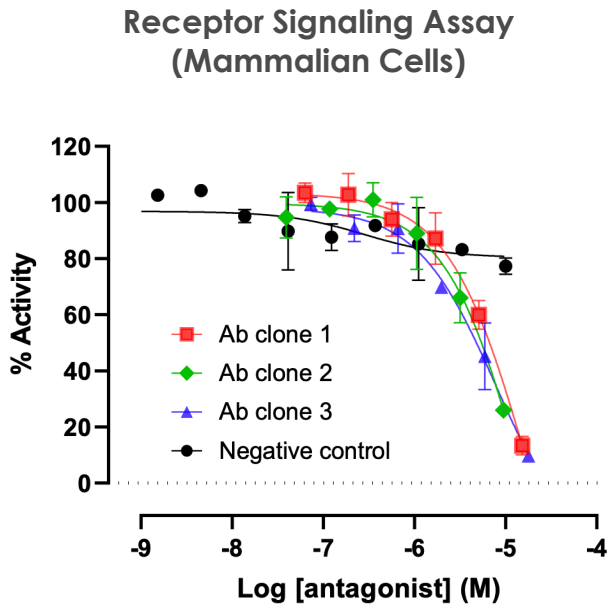


Large toolbox of biochemical methods, engineering tools, and assays

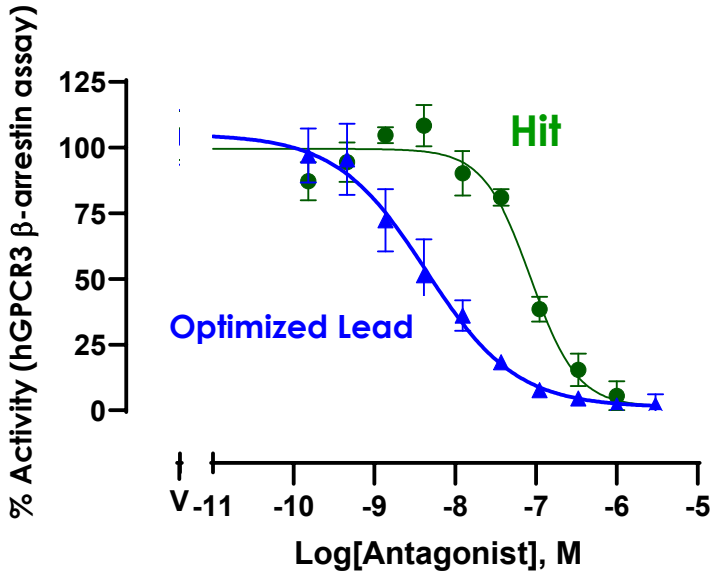
TECTONIC Therapeutic

GEODe™ Platform Discovery Capabilities Deliver Selective, Ligand Competitive Orthosteric Antagonists

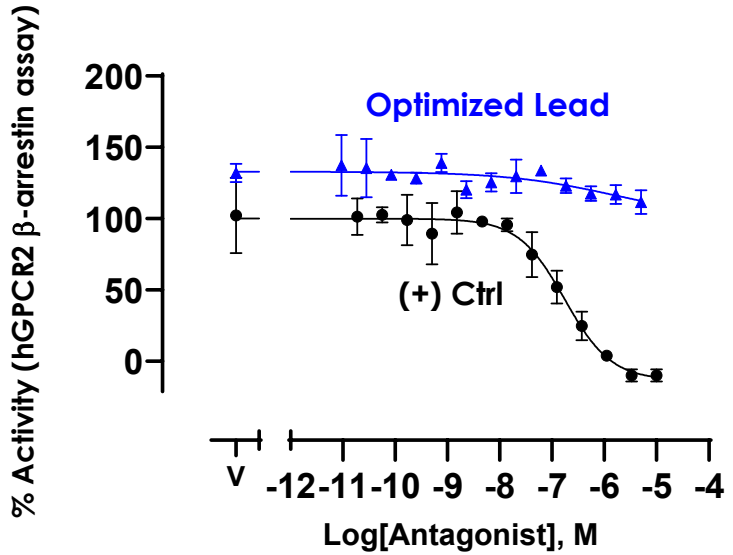
PURIFIED ANTIBODIES ARE FUNCTIONAL ANTAGONISTS*



OPTIMIZATION IMPROVES ORIGINAL POTENCY BY ~20X



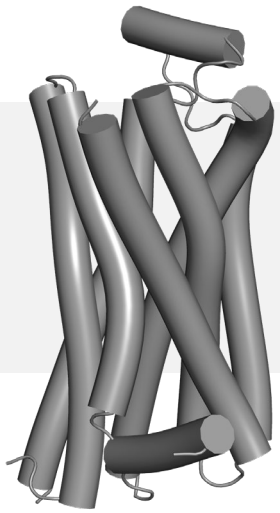
SELECTIVE (NO EFFECT ON OFF-TARGET GPCR)



**Latest generation proprietary libraries delivering initial hits with >10X potency*

Our Proprietary Antigen Formats Enable Screening for Biologics with Agonist Activity

Inactive GPCR



Membrane

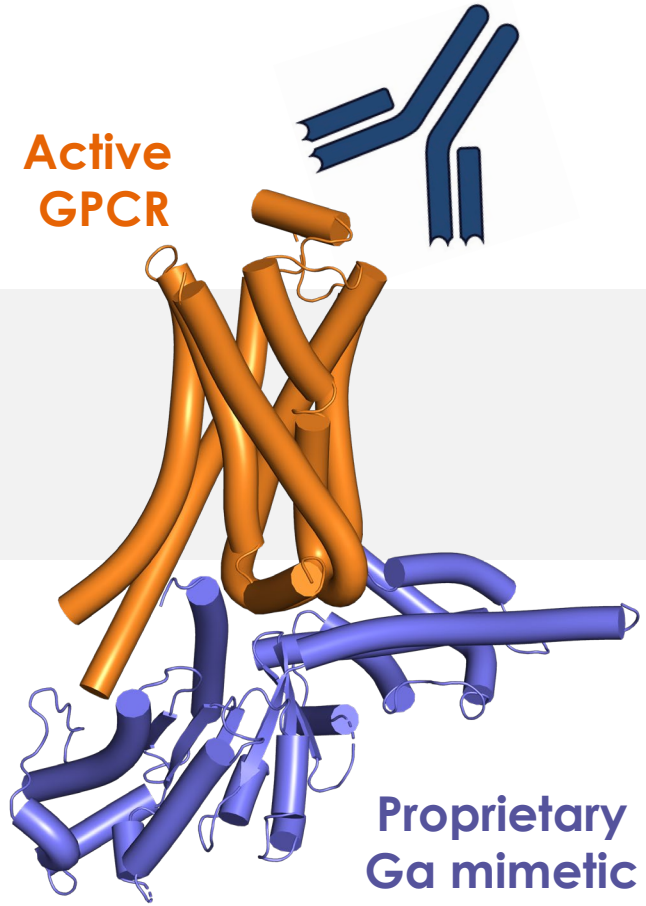
Cytosol

TECTONIC Therapeutic

Proprietary Ga Mimetics

Designs Driven by Machine Learning and Energy Prediction Algorithms

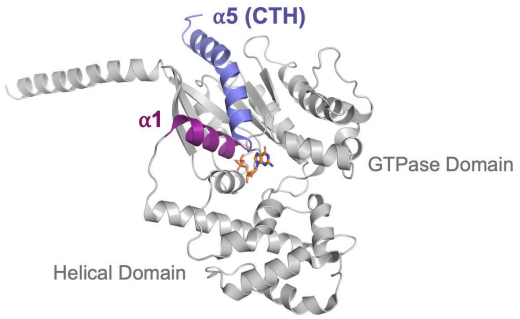
Active GPCR



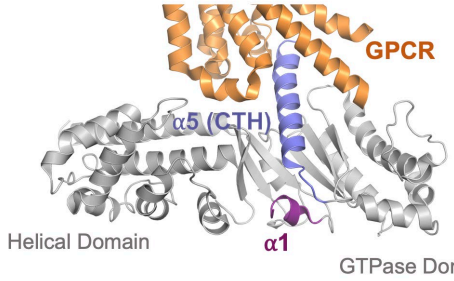
Proprietary Ga mimetic

Design of Our Proprietary Gα Mimetics Is Driven by the Latest in Machine Learning and Energy Prediction Algorithms

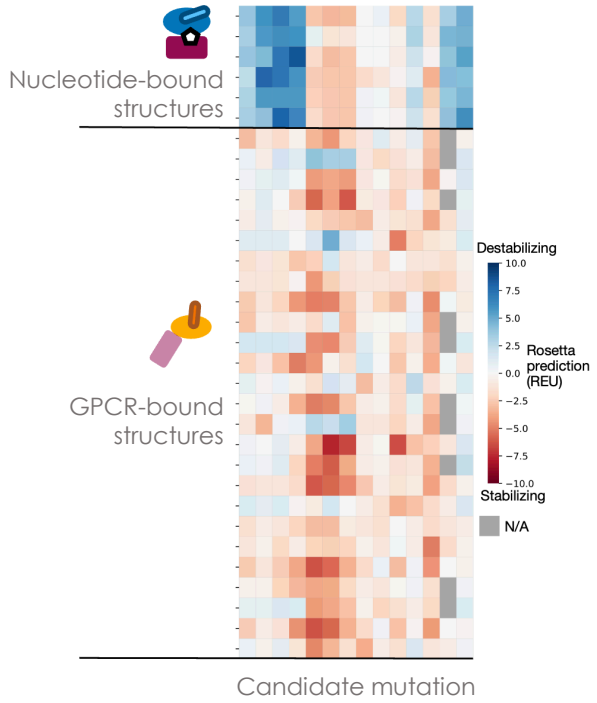
Nucleotide-bound Confirmation



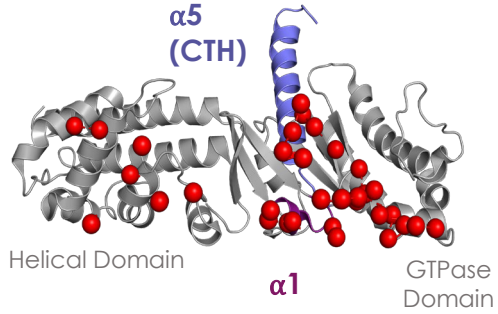
Receptor-bound Confirmation

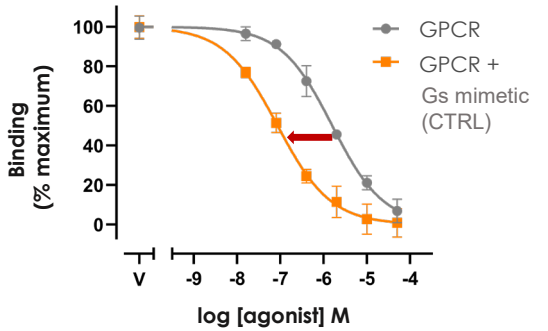


In-silico Deep Mutational Scanning for Receptor-bound Stabilizing Mutations



Mutations Predicted to Stabilize the GPCR Bound Conformation of $G\alpha_s$ and Increase Agonist Affinity





Competition binding assay

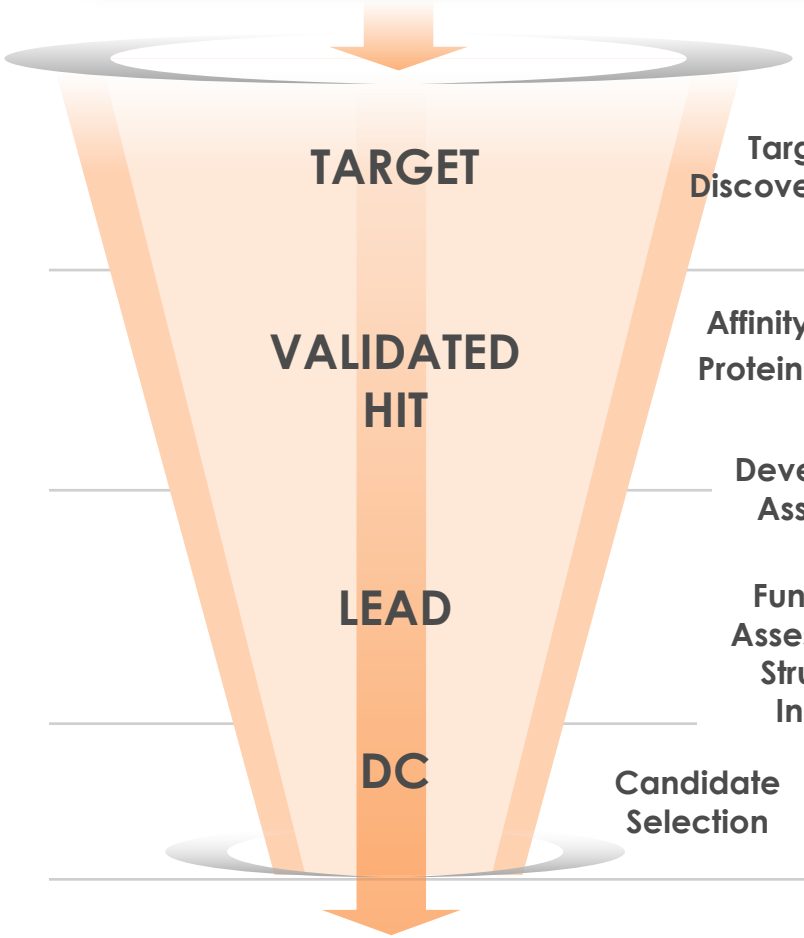
Ongoing enhancement of our ability to screen for biologics with agonist activity

TECTONIC Therapeutic

End-to-end Capabilities in Place at Tectonic for Continued Discovery of Optimal DCs

TECTONiC Therapeutic

Suite of Ab Discovery, Optimization and Characterization Capabilities



Target Prep for Discovery Campaigns → **GPCR Biochemistry**

- GPCR structural and mechanistic know-how
- Overexpression & stabilization of target
- Mammalian and insect cell expression methods

Affinity Maturation Protein Engineering → **Antibody Discovery**

- Antibody yeast display
- Custom selection methods for GPCR targets
- NGS to identify diverse sequences

Developability Assessment → **Protein Sciences**

- High throughput antibody expression
- Biochemical binding Assays
- Biophysical characterization

Functional Assessment / Structural Insights → **Cellular Pharmacology**, **Structural Biology**

- Signaling and cell biology assays to validate lead functionality
- Cryo-EM of Ab/receptor complex to gain key mechanistic insights, understand SAR

Candidate Selection → **Disease Biology**, ***In vivo* Pharmacology**

- Disease-specific cell assays
- PK and animal models

TECTONIC Therapeutic

TX45: Fc-RELAXIN FUSION PROTEIN

RXFP1 agonist with differentiated profile

Hemodynamic and Anti-fibrotic Properties of Relaxin Demonstrated by its Role in Pregnancy

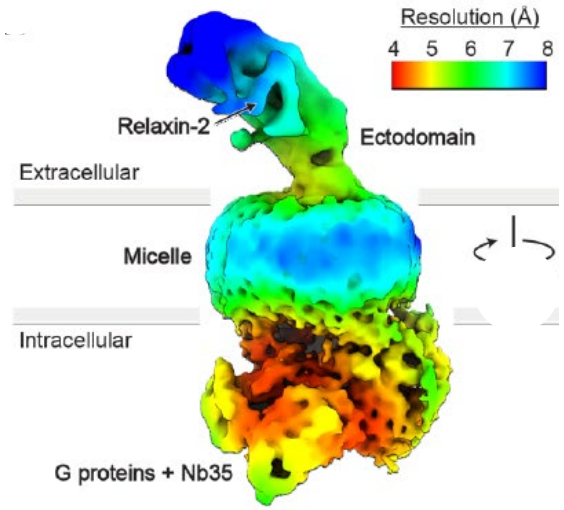
Pharmacology

AGONIST

Natural Ligand of RXFP1 Receptor

No RXFP1 internalization from relaxin agonism → no desensitization with chronic therapy

Relaxin upregulated in pregnancy



Local resolution cryo-EM map of full-length RXFP1–Gs complex
BioRxiv: https://doi.org/10.1101/2022.01.22.477343

Facilitates Gestation

PULMONARY AND SYSTEMIC VASODILATOR

Increases cardiac output to accommodate the increased demand from developing fetus

ANTIFIBROTIC

Prepares musculoskeletal tissues for pregnancy and childbirth

The First Recombinant Relaxin (serelaxin) Demonstrated Safety and Benefit in Acute Heart Failure (AHF) in Trials of >11,000 Patients

-Note: trials only included a two-day relaxin infusion

Study (WHF Day 5)	Relative Risk [95% CI]	N(drug)	N(pbo)
Pre-RELAX AHF	0.56 [0.22 – 1.45]	42	61
RELAX-AHF	0.54 [0.37 – 0.78]	581	580
RELAX-AHF-2	0.90 [0.76 – 1.07]	3274	3271
RELAX-AHF-EU	0.71 [0.52 – 0.98]	1756	894
RELAX-AHF-ASIA	0.42 [0.21 – 0.84]	437	433
Meta Analysis	**0.77 [0.67 – 0.89] p = 0.0002**	6090*	5239

Effects of serelaxin on worsening heart failure (WHF) – fixed-effect (FE) meta-analysis; serelaxin 30 µg/kg/day vs. placebo,. CI, confidence interval.

PK limitations of relaxin a major hurdle to its development for chronic diseases

Our GEODe Protein Engineering capabilities address this challenge

- One of two pivotal studies included in meta-analysis, RELAX-AHF-2, failed to achieve the co-primary endpoints, and we believe that two factors contributed to this outcome
  - It was ambitious to expect that a two-day infusion of serelaxin, with its short half-life and mechanism of action, would demonstrate clinical benefit at 6 months
  - Operational challenges with patient enrollment may also have had an impact

*Teerlink J.R. et al. Eur. J. Heart Fail. 2019; 22: 315-329; patients from RELAX-AHF-JP (N=30 total) not listed in table

TX45 is Engineered to Solve a Critical PK Problem Observed with Other Relaxin Molecules

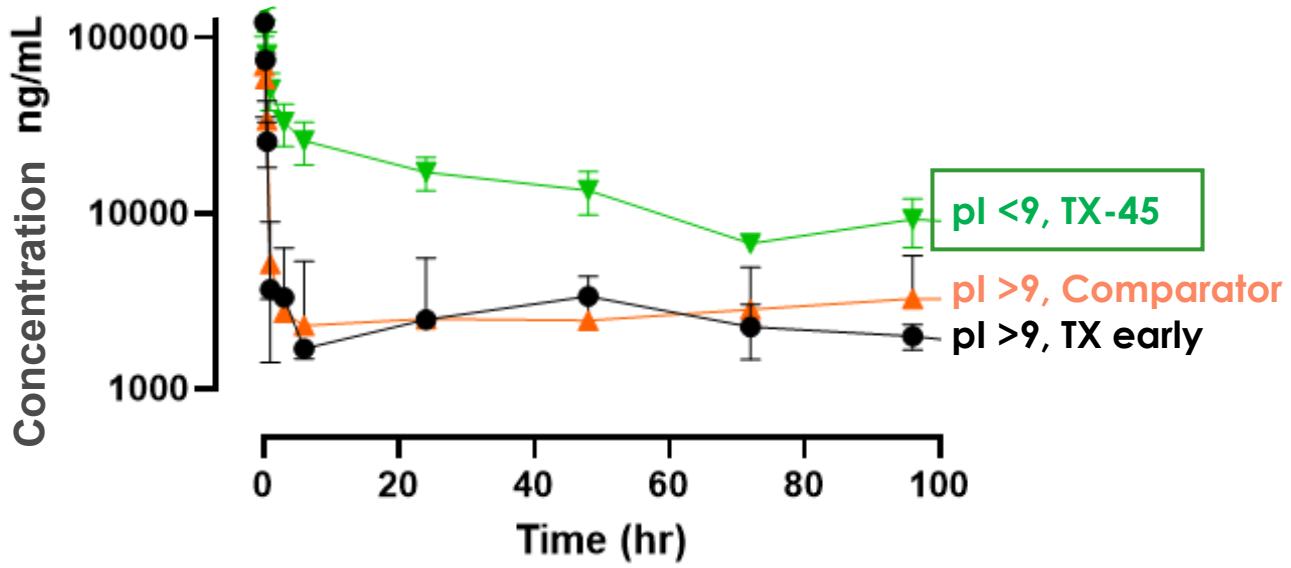
Relaxin has **very short *in vivo* half-life** Fc-fusion needed to improve PK

Relaxin Fc-fusions **have steep decline in exposure after dosing** (>90%) because of glycocalyx binding due to high pI[1]

Engineering TX45 to **reduce net positive charge (and lower pI) prevents rapid clearance**

TX45 EXHIBITS SUPERIOR PROFILE vs. PARENT COMPOUND AND COMPARATOR[2] MOLECULE[3]

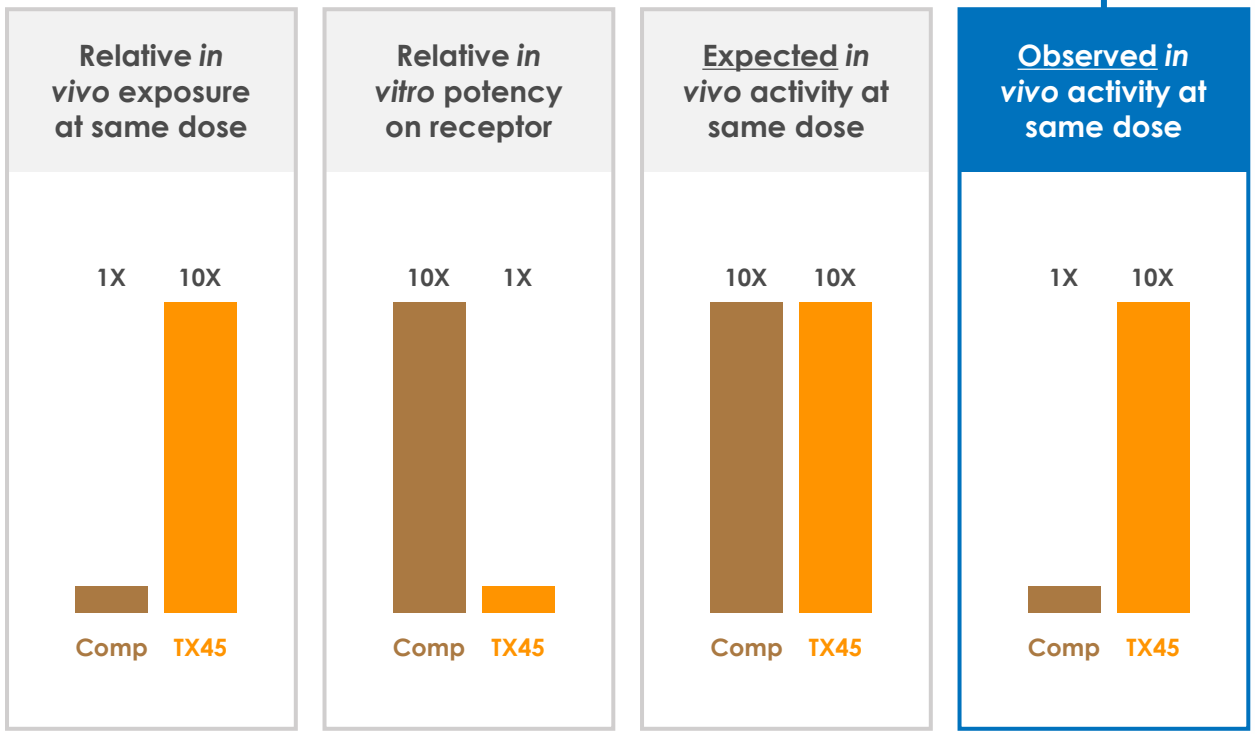
Preclinical Rat Pharmacokinetic Data

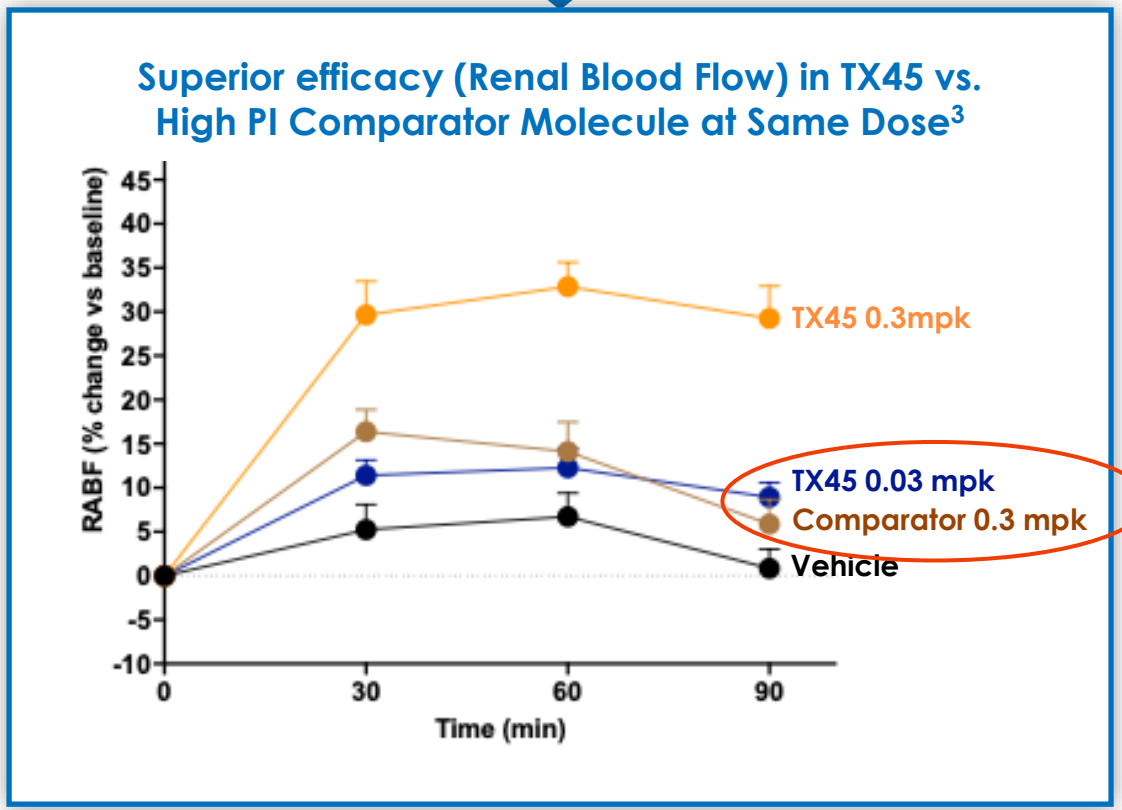


1. Isoelectric Point
2. High pI Fc-relaxin fusion protein described in literature
3. Source: Tectonic internal data

TX45 Reflects Significant Protein Engineering to Optimize Its Pharmacology

TX45 results in ~10x greater *in vivo* potency over comparator[1] molecule than predicted based on PK and *in vitro* activity[2] – potentially from reduced trapping of drug in glycocalyx, resulting in increased free drug available to activate RXFP1 in tissues





1. High pI Fc-relaxin fusion protein described in literature
2. ~0.03 mpk of TX45 has similar efficacy as 0.3 mpk of Comparator
3. Source: Tectonic internal data

TECTONIC Therapeutic

TX45 – Optimized RXFP1 Agonist for Group 2 PH in HFpEF

✓ **Potential Best-in-Class Relaxin Agonist with Optimized PK**	• Protein engineering has extended pharmacologic half-life to support monthly dosing
✓ **High Unmet Need in Group 2 PH with HFpEF[1]**	• No approved therapy • >600,000 patients in US • High 5-year high mortality
✓ **Mechanism may be Ideal to Address Group 2 PH**	• Pulmonary + systemic vasodilation, cardiac relaxation • Reversal of fibrosis in pulmonary vasculature and heart • Anti-inflammatory
✓ **Supporting Clinical and Pre-clinical Data**	• Hemodynamic benefit in studies of serelaxin in AHF • Clear benefit observed with TX45 in rodent PH and CHF models
✓ **Streamlined Development Strategy**	• No outcome study needed • Enrichment strategy for CpcPH where there is greatest unmet need • Enables potential early launch relative to congestive heart failure
✓ **Potential to Expand Indications**	• Other PH Groups, Heart failure, renal disease

1. Heart Failure with preserved Ejection Fraction

Pulmonary Hypertension Consists of 5 Distinct Diseases

Group 2 PH is of Greatest Interest for TX45's Initial Indication

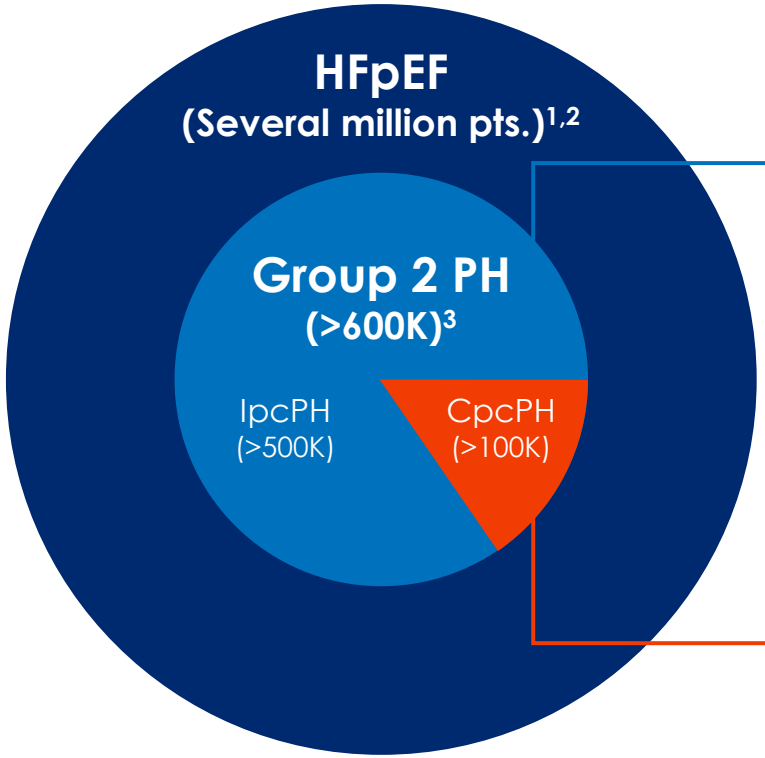
Group 1 ("PAH") (~25,000[1])	Group 2 (>600,000[1])	Group 3	Group 4 ("CTEPH")	Group 5 (Misc.)
• Idiopathic • Hereditary • Connective tissue disease-associated • Congenital heart disease-associated • Drug-induced	• **Due to left heart disease (HFpEF, HFrEF) or valvular heart disease** • **CAD, HTN, T2DM[2], high cholesterol are risk factors** • **Two Subtypes: CpcPH / IpcPH**	• Due to lung disease or hypoxia • May be due to COPD, interstitial lung disease (i.e., IPF) or obstructive sleep apnea	• Chronic thrombo-embolic pulmonary hypertension –i.e., as a consequence of blood clots	• Miscellaneous group with causes unclear or multiple underlying factors

1. US Prevalence
2. CAD: Coronary Artery Disease, HTN: Hypertension, T2DM: Type 2 Diabetes Mellitus

Nat. Pul. Hypertension Unit, Ireland

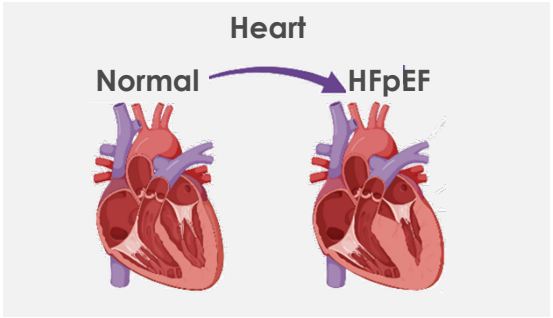
Our Focus is on the Group 2 PH Subset of Heart Failure with Preserved EF (HFpEF)

Clinical Program Designed to Enable Evaluation of Efficacy in Overall Population and CpCPH



IpcPH (**I**solated, **p**ost **c**apillary **PH**)

Increased Left Ventricle Filling Pressures
↓
Increased Pulmonary Venous Pressures
↓
Passive Pressure Backflow
↓
Pulmonary Hypertension



CpcPH (**C**ombined, **p**re- and post **c**apillary **PH**)

Chronic PH and/or Other Drivers
↓
Permanent Vascular Changes, e.g. Pulmonary Artery Remodeling
↓
Increased Vascular Resistance
↓
Right Heart Failure

TECTONIC Therapeutic

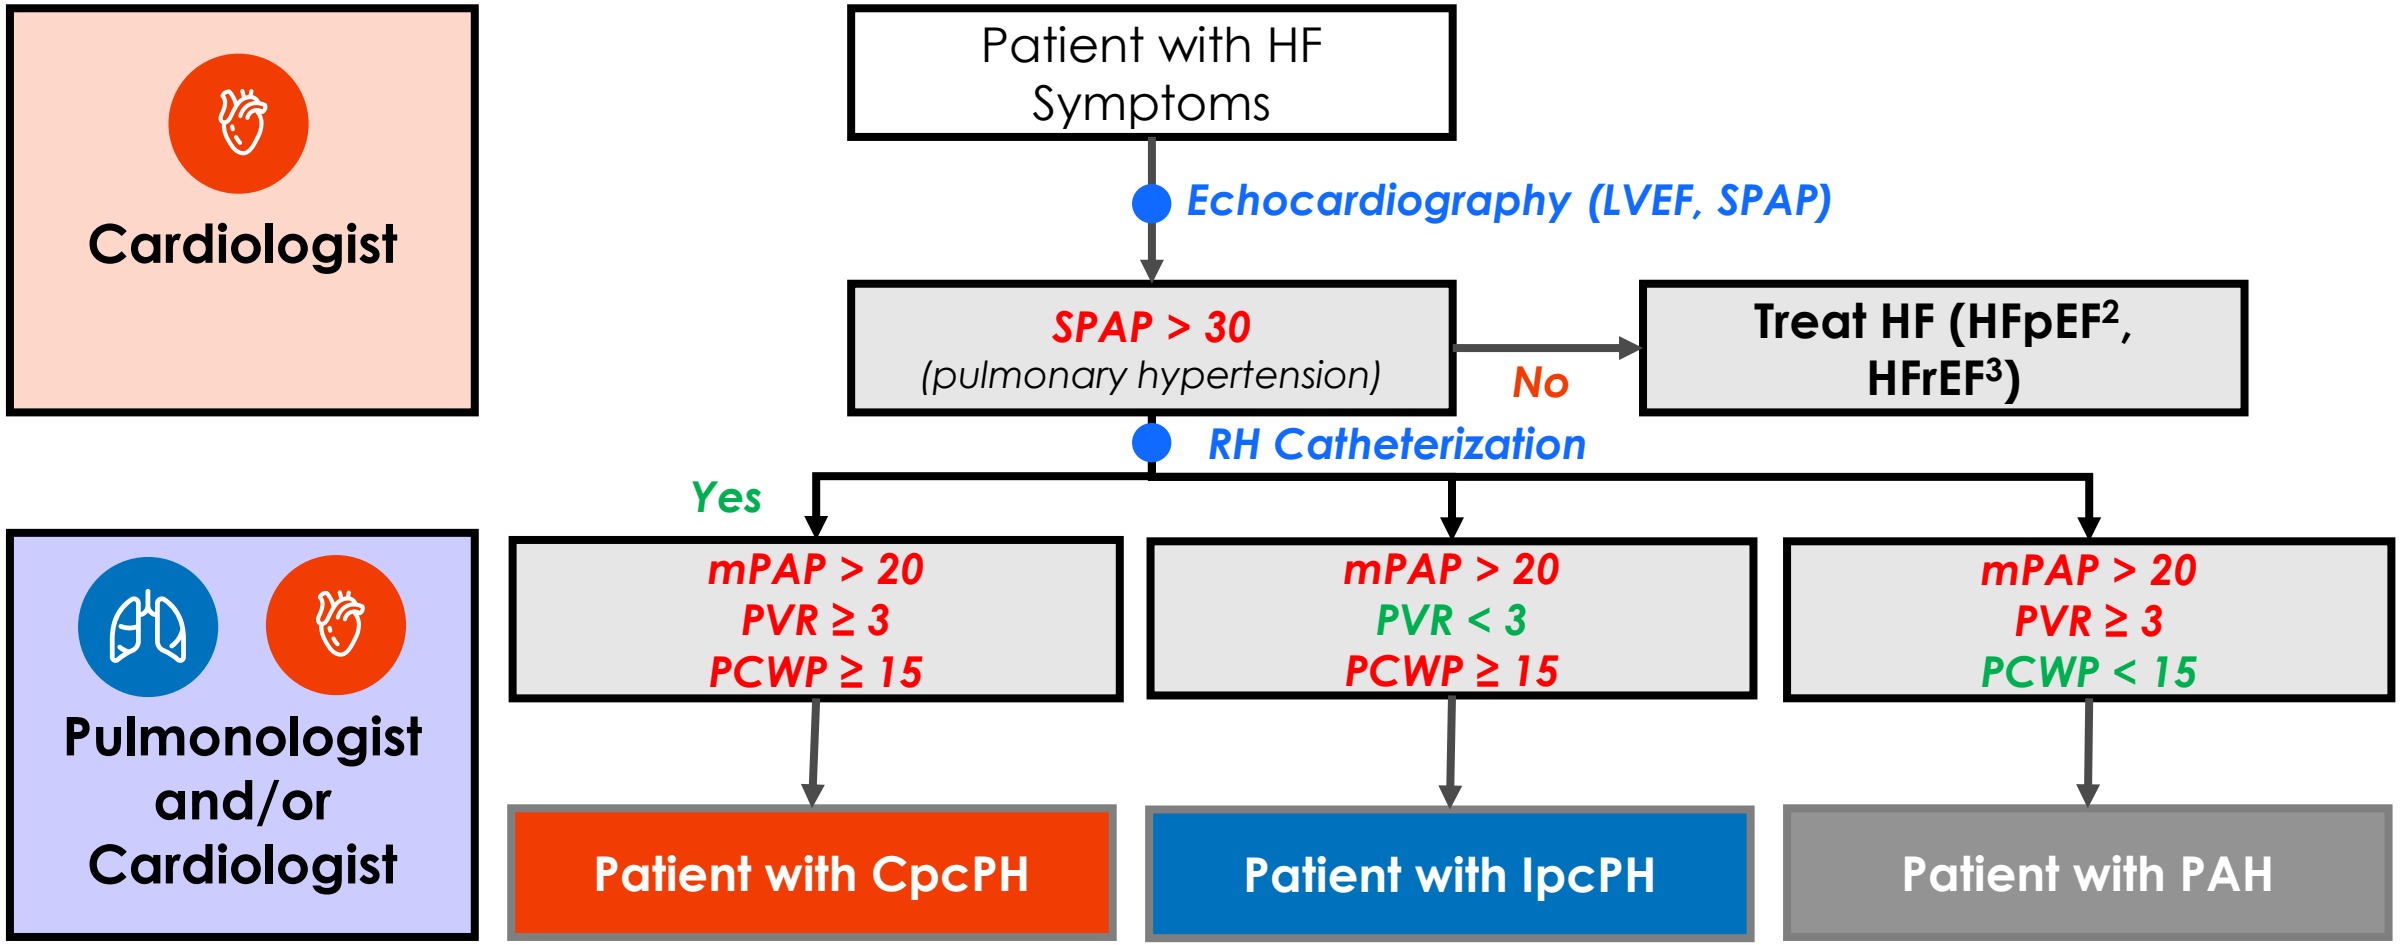
Group 2 PH: Patient Journey

Key Hemodynamic Measures in Pulmonary Hypertension

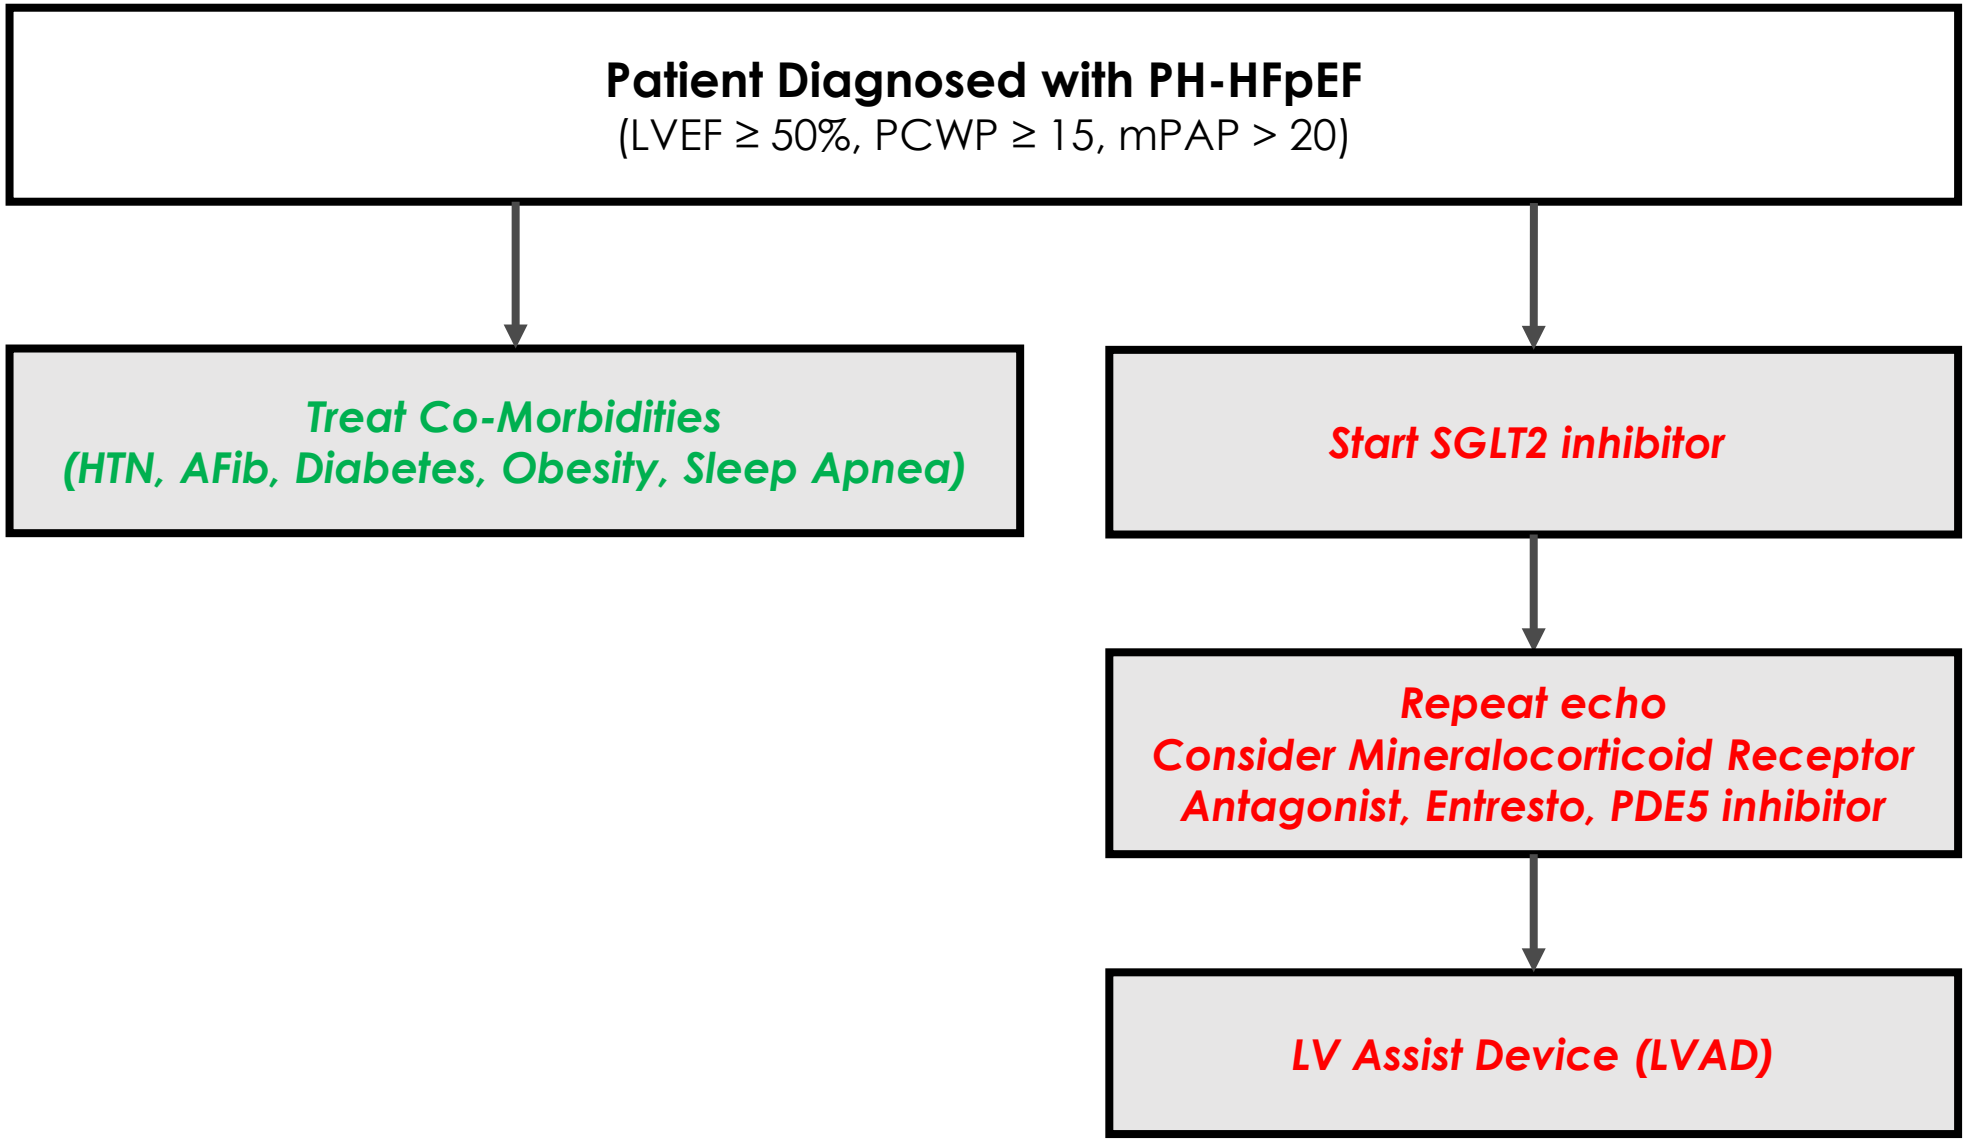
Measure	Definition	Detection Method(s) / Formulas	Clinical Significance
mPAP Mean Pulmonary Arterial Pressure (mm Hg)	**Fluid pressure in the lung arteries**	Directly measured by RHC sPAP estimated by echo	**Key parameter for diagnosing pulmonary hypertension of all causes (Groups I-V)**
PVR Pulmonary Vascular Resistance (Wood Units)	**Resistance to blood flow in pulmonary arteries ("narrowness of pipes")**	Calculated from mPAP, PCWP, and CO obtained by RHC PVR = (mPAP-PCWP)/CO	**Provides information about disease/narrowing specifically in pulmonary arteries**
PCWP Pulmonary Capillary Wedge Pressure (mm Hg)	**Fluid pressure in lung capillaries – measure of left atrial pressure**	Directly measured by RHC	**Used to assess left ventricular filling abnormalities – elevated in left sided heart failure ("hard to fill pump")**
CO Cardiac Output (L / min)	**Amount of blood pumped per unit time**	CO directly measured by RHC thermodilution	**CO is a key measure of heart function and is depressed in heart failure**

Group 2 Pulmonary Hypertension (PH) Patient Journey

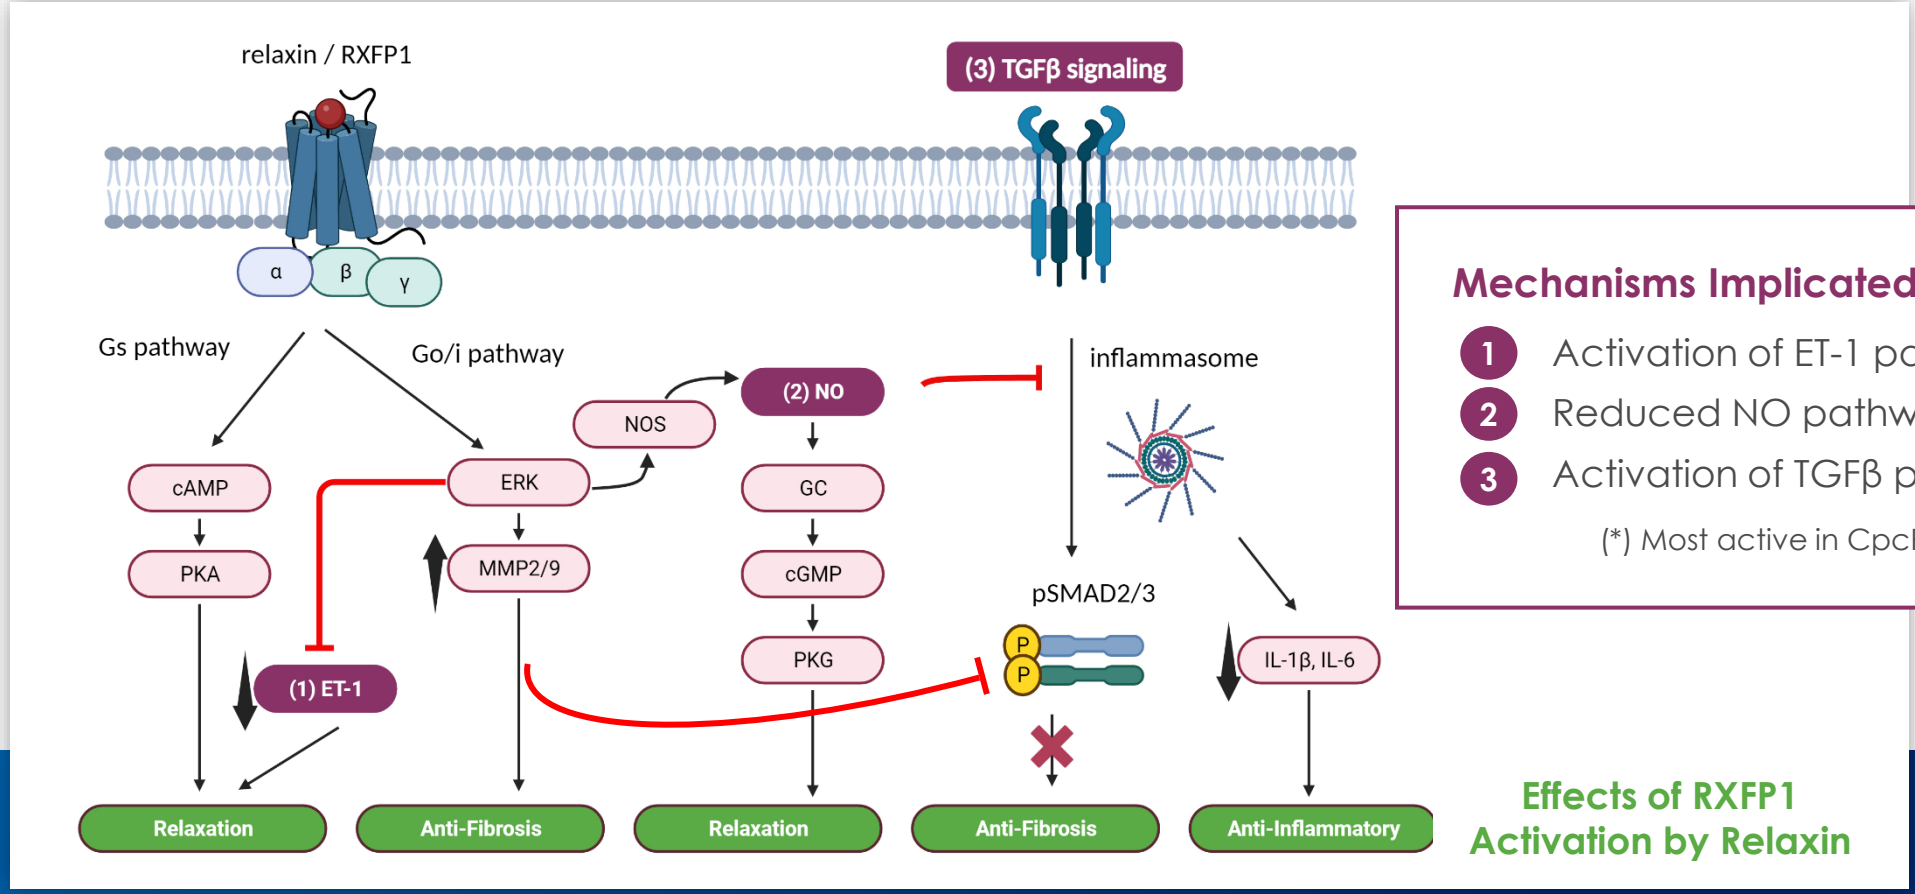


(1) LVEF: left ventricular ejection fraction; SPAP: estimated systolic pulmonary artery pressure by echo; mPAP: mean pulmonary artery pressure; PVR: pulmonary vascular resistance; PCWP: pulmonary capillary wedge pressure; CpcPH: combined pre-and post-capillary pulmonary hypertension; IpcPH isolated post-capillary PH
(2) HFpEF: Heart Failure with preserved Ejection Fraction
(3) HFrEF: Heart Failure with reduced Ejection Fraction

Treatment of Pulmonary Hypertension (PH) in the Setting of Heart Failure with Preserved Ejection Fraction (HFpEF)



Relaxin Multimodal MOA Addresses Pathways Implicated in Group 2 PH Pathophysiology



Mechanisms Implicated in Group 2 PH

1. Activation of ET-1 pathway(*)
2. Reduced NO pathway activity(*)
3. Activation of TGFβ pathway

(*) Most active in CpcPH subset

Effects of RXFP1 Activation by Relaxin

- ✓ Pulmonary and systemic arterial vasodilation
- ✓ Favorable remodeling: anti-fibrotic effect in heart and pulmonary vasculature
- ✓ Anti-inflammatory

TECTONIC Therapeutic

Relaxation and Anti-Fibrotic Effects of Relaxin Have Potential for Disease Modification in Group 2 PH

- Heart, and vascular dysfunction contribute to disease pathology
- Renal dysfunction also present in many of these patients

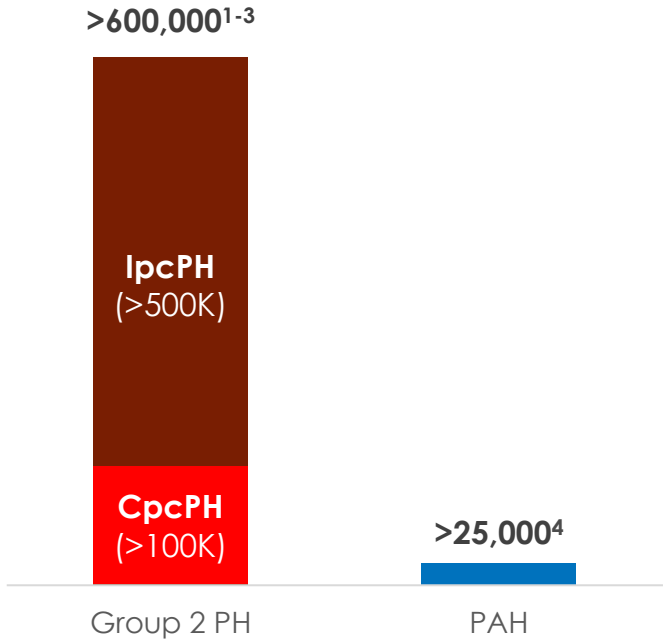
CHARACTERISTICS OF GROUP 2 PH	IpcPH	CpcPH	ANTICIPATED RELAXIN EFFECTS
Pulmonary artery narrowing, thickening, stiffening, fibrotic remodeling		✓	Pulmonary Vasodilation Anti-inflammatory, anti-fibrotic
Right Ventricular Dysfunction	✓	✓	Right ventricular remodeling
Thickening and stiffening of Left Ventricle	✓	✓	Peripheral vasodilation, cardiac relaxation, left ventricular remodeling
Compromised kidney function	✓	✓	Improvement in kidney function

Reducing pulmonary pressures and improvement of left heart function are both key to providing efficacy

Group 2 PH vs. PAH

- Significant opportunity for a first-in-indication therapy
- Highly motivated physicians and patients

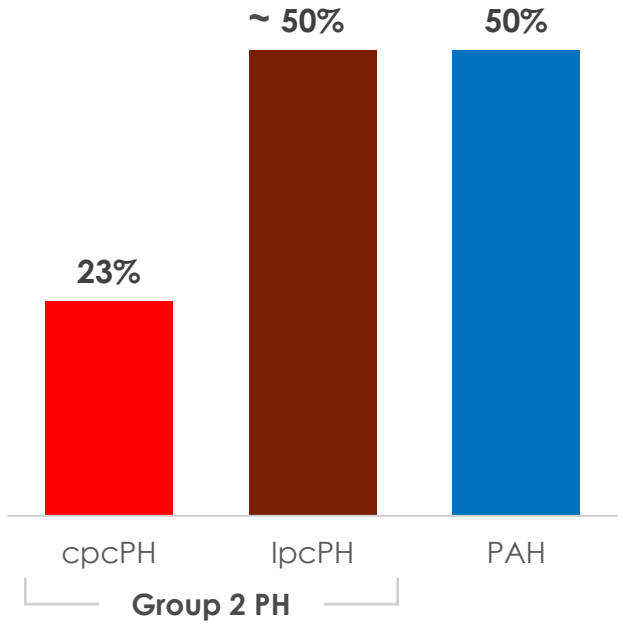
US PREVALENCE >> PAH



Multi-$ Billion Market Opportunity

>$4 Billion Market in US Today[5]

5 YEAR SURVIVAL ≤ PAH[6]



NO THERAPEUTIC OPTIONS

No approved therapies

…

Limited pipeline

PAH Drugs have not demonstrated convincing efficacy in Group 2 PH with the exception of PDE5i in CpcPH

Group 2 PH

Multiple drugs/ mechanisms approved

ET1R antagonists
PDE5 inhibitors
GC stimulators
Prostacyclins

ACTRII-Trap

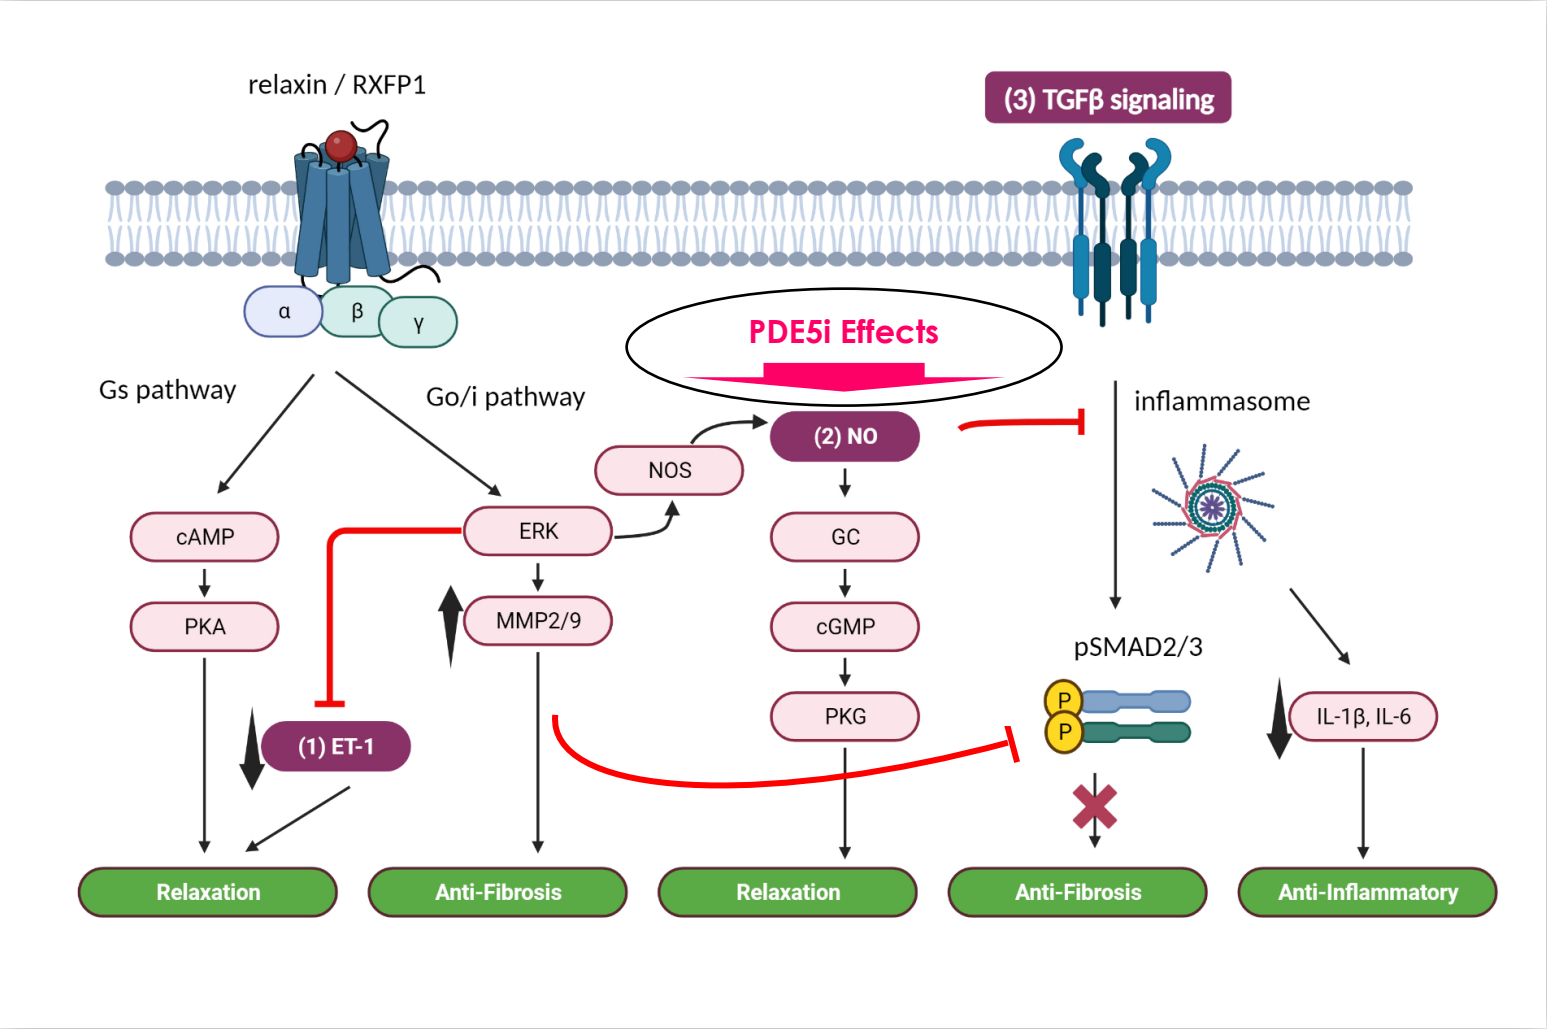
TECTONIC Therapeutic

PDE5 Inhibitors Affect Only One of Several Pathways Addressed by Relaxin



PDE5 inhibitors demonstrated efficacy across 3 studies [1-3] including:

- ✓Reduction in PVR
- ✓Improvement in exercise capacity
- ✓Decrease in heart failure hospitalizations

TX45 anticipated to be effective in both Cpc-PH and Ipc-PH because it targets additional anti-fibrotic and anti-inflammatory mechanisms on top of activation of the NO pathway

3. Kramer et al. 2019

TECTONIC Therapeutic

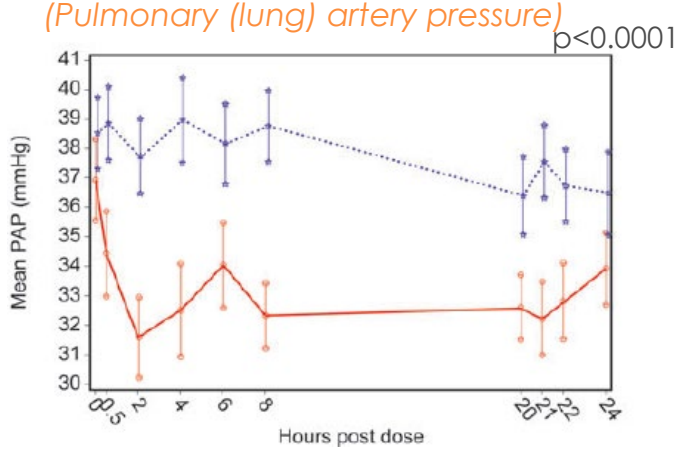
Relaxin Improves Hemodynamics in Heart Failure

Balanced pulmonary and peripheral vasodilation, and improved heart function (decreased PCWP) relevant to Group 2 PH

- Panels: serelaxin infusion for 20hrs in Acute Heart Failure patients with elevated pulmonary artery pressure (PAP) **rapidly lowered mPAP, pulmonary vascular resistance (PVR), systemic vascular resistance (SVR), pulmonary capillary wedge pressure (PCWP)*,****
- Not shown: serelaxin also improved **right atrial pressures (RAP), and renal function***
- In a similar study in patients with chronic CHF, **a reduction in PCWP and an increase in cardiac output** was demonstrated**

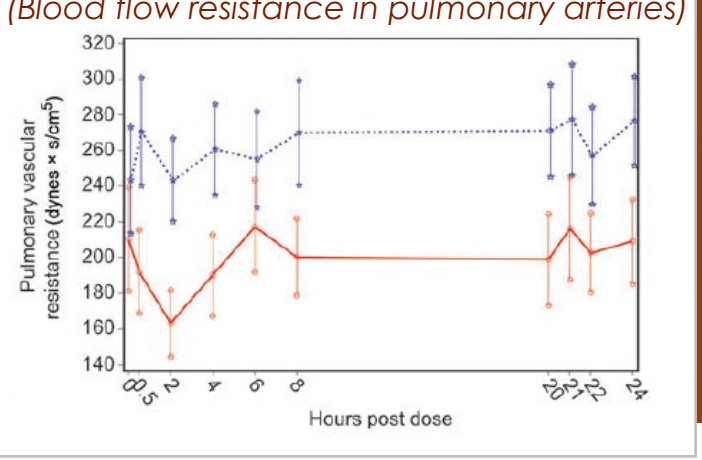
mPAP

(Pulmonary (lung) artery pressure)



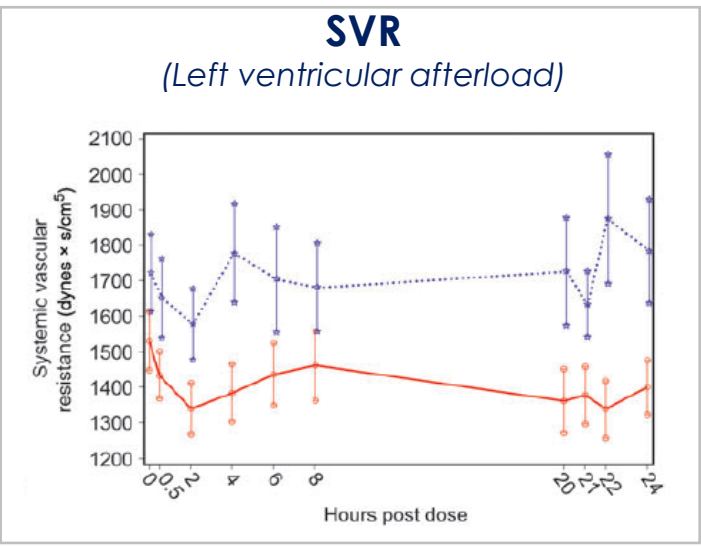
PVR

(Blood flow resistance in pulmonary arteries)



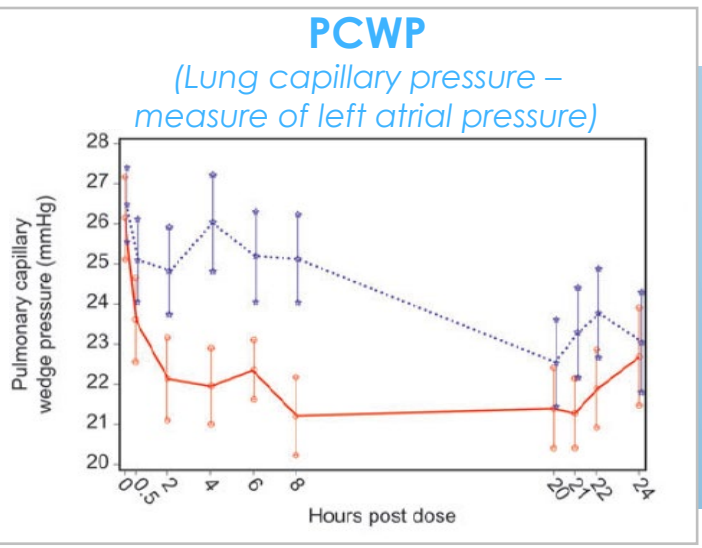
SVR

(Left ventricular afterload)



PCWP

(Lung capillary pressure – measure of left atrial pressure)



*Ponikowski P. et al. Eur. Heart J. 2014, **Dschietzig T. et. Al. Ann NY Acad Sci 2009
** Diuretics were allowed after the first 8 hours

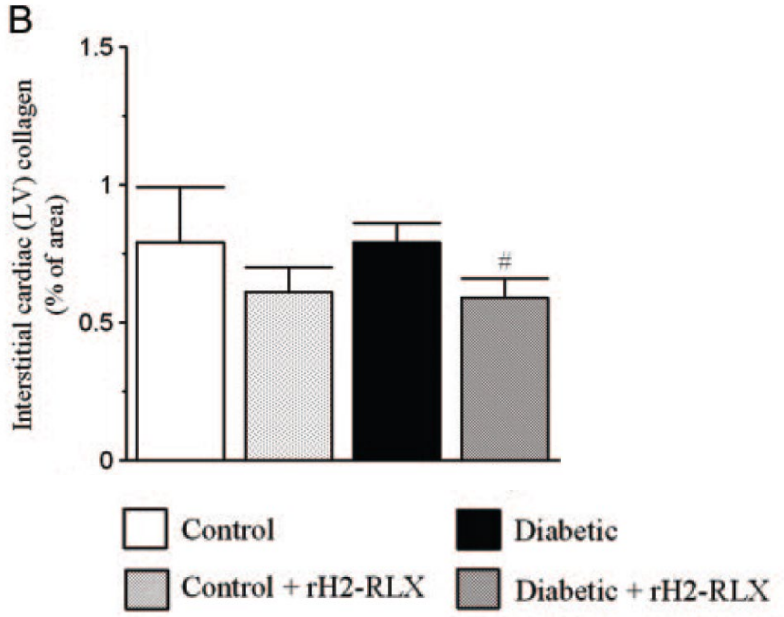
Human relaxin-2 reverses cardiac fibrosis

2 wk infusion in STZ-treated diabetic/HTN mRen-2 rats

(Samuel C.S. et al. 2008)



* GFP = green fluorescent protein (adenovirus used as negative control)

Additional Anti-Fibrotic Effects of Relaxin Demonstrated in Preclinical Animal Models of Heart Failure

In other rodent models of heart failure, Relaxin has been shown to also:

- ✓**Inhibit** TGFβ or ANG-II induced collagen synthesis in cardiac fibroblasts[1]
- ✓**Prevent** interstitial and perivascular fibrosis, with effect superior to enalapril[2]
- ✓**Prevent** diastolic dysfunction[3]
- ✓**Prevent** and **Reverse** cardiac hypertrophy[3]
- ✓**Reverse** cardiac inflammatory gene expression[4]

Findings consistent across models and studies published by different investigators

1. **Relaxin knockout** model of cardiac fibrosis (mouse) - *Samuel C.S. et al. 2004*
2. **Isoproterenol infusion** model of heart failure (mouse) - *Samuel C.S. et al. 2014*
3. **Transverse aortic constriction** model of HFpEF (rat) - *Shuai X.X. et al. 2016, Lapinskas T. et al. 2020*
4. **Aging-induced** cardiac inflammation (rat)- *Martin B. et al. 2018*

TX45 Clinical Program and Preliminary Phase 1 Data

TX45 Development Program Overview

Planned readouts in 2025 and 2026

2024	2025	2026

Phase 1a
Safety, tolerability, PK/PD

Healthy Volunteers

Toplined Sept '24
Safety, PK, PD (Renal Blood Flow)

Phase 1b
RHC study to establish hemodynamic proof of concept

Group 2 PH with HFpEF

Expected late Q1'25/early Q2'25
mPAP, PVR, PCWP, CO

Phase 2
Randomized, 6-month study

Group 2 PH with HFpEF (enriched for CpcPH)

Expected 2026
PVR, SV, mPAP, 6MWT

RHC: Right Heart Catheter
mPAP: Mean Pulmonary Arterial Pressure
PVR: Pulmonary Vascular Resistance
CO: Cardiac Output
6MTW: 6-Minute Walk Test

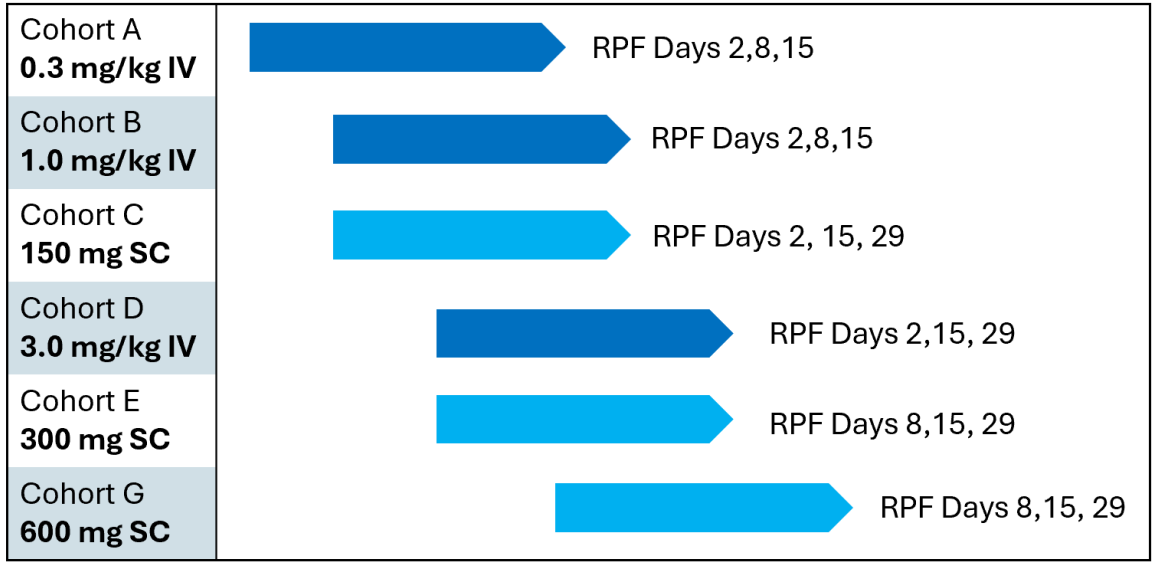
Development Plan Reviewed with FDA via Pre IND

TECTONIC Therapeutic

TX45 Phase 1a Single Ascending Dose Study

- **Study has completed**
- **TX45 was well tolerated with minimal adverse events, no drug-related SAEs**
- **Pharmacokinetics**
  - PK is dose proportional
  - No evidence of immune mediated clearance
- **Pharmacodynamics from 0.3 mg/kg cohort (lowest dose)**
  - 30% increase in renal plasma flow on Day 2 post dose persisting at least until Day 8 post dose
  - Magnitude of effect consistent with serelaxin's effect
  - **Meets "go criteria"**

TX45 SAD Dose Escalation Plan

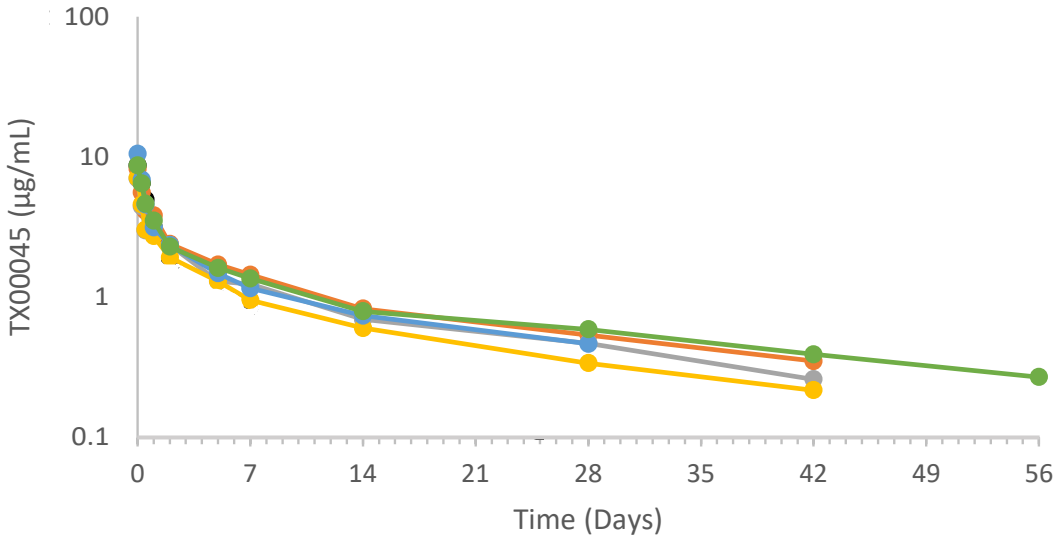


RPF = Renal Plasma Flow

Phase 1a Study: Preliminary Single Dose TX45 Pharmacokinetic/Pharmacodynamic Data (lowest dose)

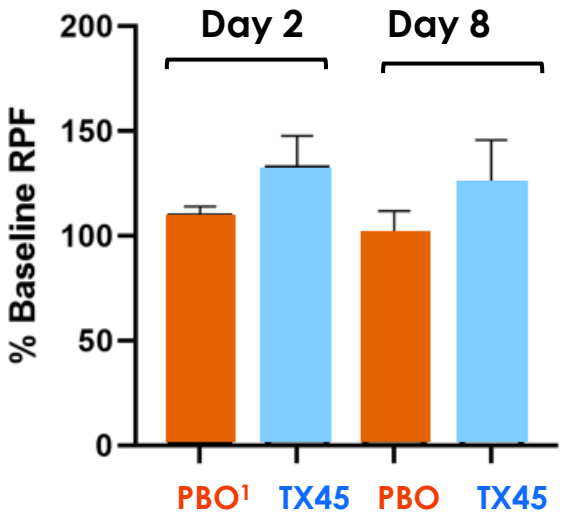
TX45 Serum Concentrations from Phase 1a Subjects

Cohort A 0.3 mg/kg IV



Renal Plasma Flow in Phase 1a Subjects

TX45 Dosed on Day 1 - Cohort A 0.3 mg/kg IV



Based on Preliminary Data, We Anticipate Potentially Monthly Dosing at Optimal SC Dose

1. Placebo

Preclinical PK/PD from Acute RBF Model Informs Target Plasma Concentration Levels at Trough for Therapeutic Effect

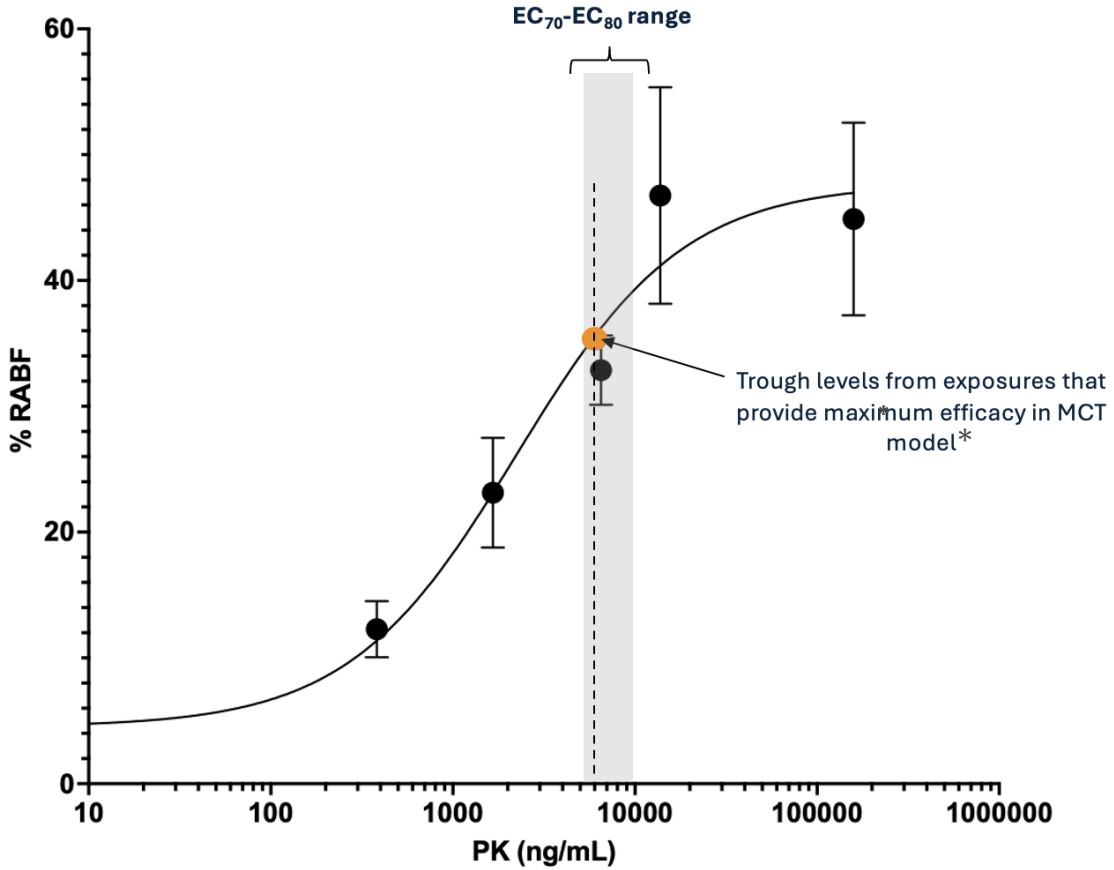
RBF Model

Used to assess pharmacodynamic response to TX45 administration based on acute vasodilatory effects of relaxin, as measured by increased rat renal blood flow (RBF)

MCT Model

Used to assess the therapeutic anti-inflammatory/anti-proliferative efficacy of TX45 in a rat model of pulmonary hypertension

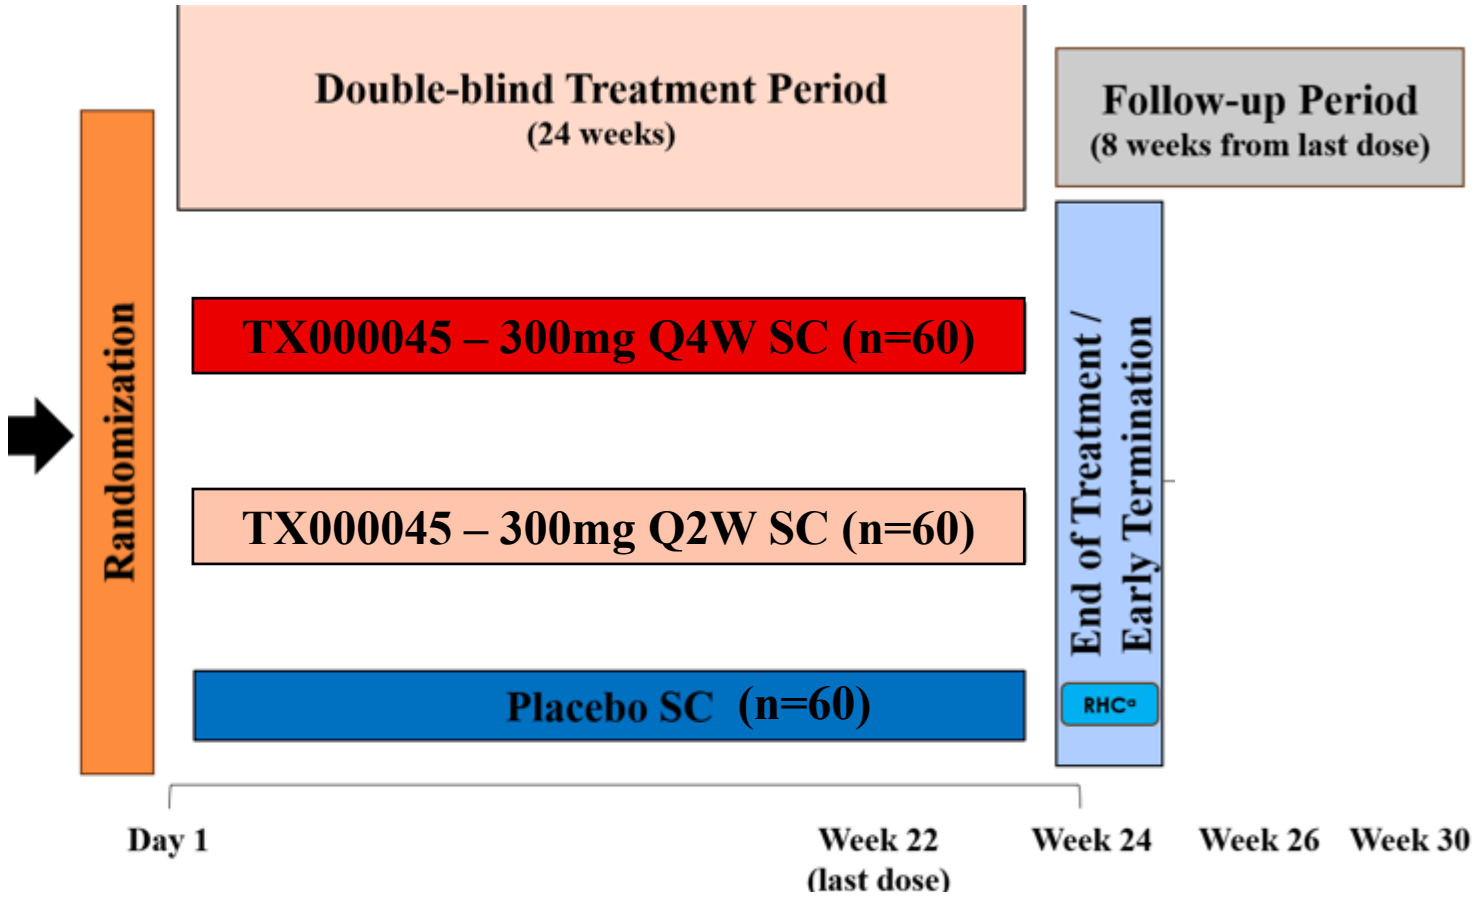
The trough levels required for maximal efficacy in the MCT model fall between the EC_{70} and EC_{80} response in the RBF model



** The exposure necessary for human EC70-80 is predicted to be 3-fold lower than in rats given the 3x greater potency of TX45 on human RXFP1 compared to rat RXFP1*

Summary of TX45 Phase 2 Study Design

Screening
RHC prior to randomization



Significant Pharma Interest in Relaxin Tectonic has Potential Best-in-Class Molecule

Company	Format	Formulation	Expected Dosing Frequency	Population	Timing
TECTONIC Therapeutic	**Fc-Fusion** ***Engineered for optimal PK, biodistribution, high [C] formulation***	**SubQ** ***High [C] achievable***	**Q4 Weeks**	**Group 2 PH / HFpEF (enriched for CpcPH)**	**Start in August '24 Data in 2026**
AstraZeneca	Fc-Fusion	SubQ	Q2 Weeks*	Group 2 PH / HFpEF *and* HFrEF	Start: Q1 2023 1st completion: Q2 2025
AstraZeneca	Small Molecule	PO	QD*	CHF	Start: Q2 2024 1st completion: Q4 2025
Lilly	h-Albumin-mAb-Fusion	SubQ *Injection site reactions*	Q Weekly*	HFpEF	Start: Q1 2023 1st completion: Q4 2025

* Based on dosing frequency in Phase 2 studies listed in clinical trials database

HHT Program

First-in- indication opportunity for 2nd most common genetic bleeding disorder

Hereditary Hemorrhagic Telangiectasia (HHT)

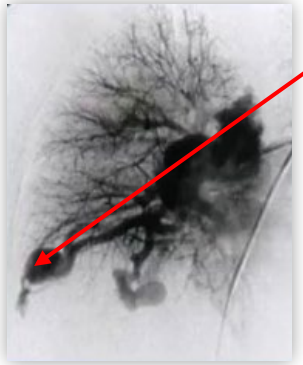
Autosomal Dominant Disease that Causes Abnormal Blood Vessel Formation

- Rare, autosomal dominant disease: ~ 75,000 patients in US
  - Mutations in the BMP9/10 pathway
- High degree of phenotypic variability (15-20% severe)
- Increased mortality risk

No currently approved therapies for HHT

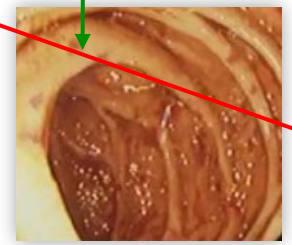
Nosebleeds

Telangiectasias

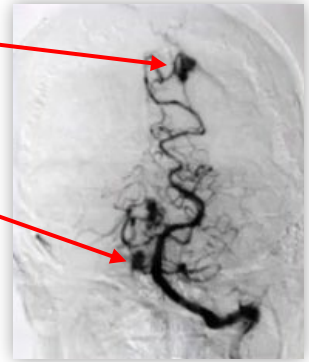


Lung

Liver



GI tract



Brain

FREQUENCY OF ABNORMAL HHT VESSELS

- **>95%** Nose (epistaxis)
- **>90%** Skin (Telangiectasia)
- **50%** Lungs (pulmonary AVMs*)
- **50%** Liver (hepatic AVMs)
- **20%** Gastrointestinal tract
- **10%** Brain (cerebral AVMs)

INCREASED FREQUENCY OF THE FOLLOWING

- Iron and transfusion dependent anemia (10-30% of patients)
- High output CHF 2nd to Liver AVM → liver transplant
- Stroke
- Brain abscesses and other deep tissue abscesses
- Venous thromboemboli (VTE)
- Pulmonary Hypertension
- Migraines

*AVM= *arterial venous malformation*

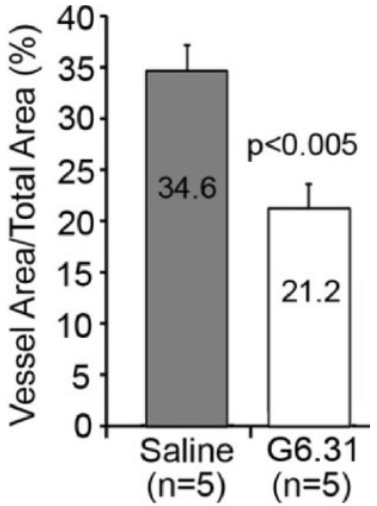
TECTONIC Therapeutic

Anti VEGF: Mouse HHT Model Predictive of Efficacy in Patients

ANTI-VEGF mAb SUPPRESSES AVM FORMATION, VISCERAL HEMORRHAGE IN HHT MODEL

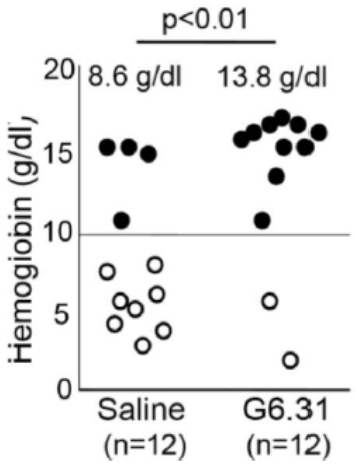
ALK-1 Conditional Knock-Out
Wound-induced vascular response

Decreases Vessel Growth



Anti-VEGF ab

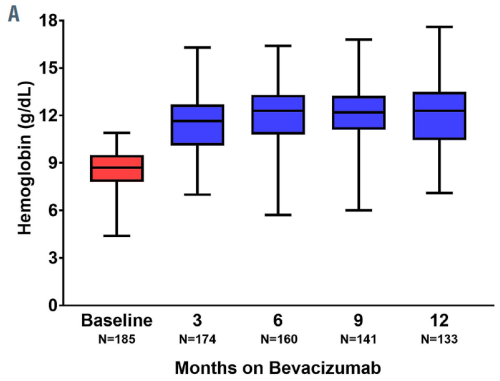
Improves Hemoglobin Levels

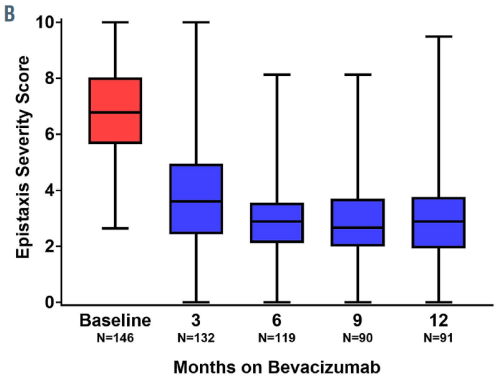


Anti-VEGF ab

Angiogenesis. 2014 Oct; 17(4): 823–830

ANTI-VEGF THERAPY REDUCES EPISTAXIS SEVERITY, IMPROVES HEM. PARAMETERS IN PATIENTS





- No rigorous clinical studies ever conducted – only evidence is from IITs
  - Patent expiration on anti-VEGF mab lowered incentive to investment in label expansion
  - Dose and Dosing interval not well explored
- Treating physicians concerned about side effects

Haematologica. 2021 Aug 1; 106(8): 2161–2169

TECTONIC Therapeutic

A GPCR3 Antagonist Significantly Reduces AVMs and Retinal Vascular Density in Animal Model of HHT

Effects of anti-GPCR3 antagonist mAb in mouse HHT model generated by immunoblocking of BMP9 and BMP10[1,2]

Projected HHT Development Program Overview

	2024	2025	2026	2027
Finalize Development Candidate (DC)	DC selected November '24	**IND Enabling Studies and CMC**		
PHASE 1a	Safety and Tolerability **Initiation Planned Q4'25/Q1'26**		**Phase I**	
PHASE 2			**Randomized 3-Month Study** Hematocrit, Epistaxis Score Blood Transfusions **Planned late 2026/early 2027**	**Patients with HHT**

TECTONIC Therapeutic

Summary

TECTONIC Therapeutic

Financial Overview

Company Ticker	NASDAQ: TECX
Investor Participation from June 2024 Private Placement	Major mutual fund, TAS Partners, 5AM Ventures, EcoR1 Capital, Polaris Partners, Farallon Capital (managed funds), Vida Ventures, Pags Group and other investors
Cash as of 9/30/24	~$159 million
Expected Cash Runway	Into Mid-2027
Common Stock Outstanding (9/30/24):	~14.7M

TECTONIC Therapeutic

Uniquely Positioned to Deliver on Value Creating Milestones

Strong Balance Sheet

~$159 Million* (as of 9/30/24)

Runway Into Mid-2027

Well positioned to execute

Pipeline of Uniquely Differentiated Assets

Multiple Inflection Points
2025, 2026, 2027

Address important clinical problems, underserved patient populations

Accomplished Team World-leader Founders

20 1st Approvals

>$50B in Annual Sales

Leadership with Proven Track Record

TECTONIC Therapeutic
